The Career and Achievements of Carl Linnaeus (1707—1778)

The Linnean Society of London, founded in 1788, takes its name from the Swedish naturalist Carl Linnaeus (1707–1778) whose botanical and zoological collections and library have been in the Society's keeping since 1829, having been purchased for the benefit of science from the executor of the Society's first President, Sir James Edward Smith (1759–1828). Linnaeus was born on 23 May 1707 at Råshult in southern Sweden and died on 10 January 1778 at Uppsala, where he had been a professor of medicine and botany since 1741. The bicentenary of his death thus provides a special occasion for exhibiting material from the Society's collections to commemorate his life and achievements.

In October 1778, in a speech from the throne, the King of Sweden, Gustaf III, declared 'I have lost a man who did honour to his fatherland as a worthy citizen, being celebrated all over the world. Long will Uppsala recall the reputation which Linné's name conferred upon it.' Those words remain true. The University of Uppsala with its high standards in science and scholarship justly honours Linnaeus who, by attracting students from many countries to Uppsala for his teaching and by publishing works still important, made internationally renowned what was at the outset of his career a relatively obscure little university in a war-impooverished country. To his Swedish contemporaries Linnaeus was primarily known as an influential university teacher, as the first President of the Swedish Royal Academy of Sciences, as a patriotic Swede zealous for his country's economic revival through the discovery, survey and utilization of her natural resources and also as the author of many learned books in Latin. To the outside world his

reputation rested on these publications, as it still does. In them Linnaeus provided a concise usable survey of all the world's plants and animals as then known, for him about 7,700 species of plants and 4,400 species of animals. These works, by reason of their encyclopaedic scope, helped to establish and standardize the consistent binomial nomenclature for species which he introduced on a world scale for plants in 1753 and for animals in 1758 and which is used today. His *Species Plantarum* (1753) and his *Systema Naturae*, 10th edition, volume 1 (1758), have accordingly been accepted, by international agreement, as the official starting points for botanical and zoological nomenclature. Scientific names published before then have no validity unless adopted by Linnaeus then or subsequently or by later authors. This confers a high scientific importance on the specimens used by Linnaeus for their preparation, many of which are in his personal collections now treasured by the Linnean Society.

LINNAEAN BINOMIAL NOMENCLATURE

The Linnaean binomial system consists essentially of giving a one-word name such as *Rhododendron* or *Equus* to a genus and a two-word name such as *Rhododendron ponticum* or *Equus caballus* to an individual species within the genus. Linnaeus did not invent binomial nomenclature even for organisms. The use of such two-word names for species or for kinds within a group occurs in many languages and goes back to remote times. It is indeed the common practice in vernacular nomenclature of everything from knives, forks and spoons, chairs and rooms to owls, rats and other organisms. For example, the two wide-spread British owls were distinguished centuries ago by vernacular binomials, the one as the Barn Owl, White Owl or Church Owl, the other as the Brown Owl or Ivy Owl. Two thousand years ago the Romans distinguished kinds of wheat as *triticum africanum*, *triticum alexandrinum*, *triticum baeticum* etc. Linnaeus's predecessors writing in Latin, among them John Ray, used such two-word names for species as *Convolvulus major* together with longer names as *Convolvulus minor vulgaris* and *Convolvulus maritimus Soldanella dictus*, the three British species being known, however, in English as 'Great Bindweed', 'Small Bindweed' and 'Sea Bindweed'. In 1753 Linnaeus provided these three species with two-word scientific names, *Convolvulus sepium*, *Convolvulus arvensis* and *Convolvulus soldanella*, in agreement with the simplicity, brevity and convenience of their vernacular names. Linnaeus linked each of these specific names for everyday use (*nomina trivialia*) with a descriptive name such as *Convolvulus foliis sagittatis utrinque acutis, pedunculis unifloris* and with references to earlier literature, notably Casper Bauhin's *Pinax Theatri botanicorum* (1623), which helped to identify the species concerned and limited the application of its two-word specific name, in theory at any rate and generally also in practice, to that one species. The general adoption by botanists and zoologists of this consistent two-word nomenclature for species during the second half of the 18th century came about because Linnaeus introduced it in comprehensive works which naturalists soon found indispensable. These works were, however, long in the making; their genesis, though not their nomenclature, goes back to Linnaeus's early years.

YOUTH AND EARLY EDUCATION, 1707-1727

Carl Linnaeus's paternal grandfather, like most Swedish peasants and farmers of his times, had no surname and was known, in accordance with the old Scandinavian name system, as Ingemar Bengtsson, being the son of Bengt Ingemarsson. When his son, Carl's father, Nils Ingemarsson (1674-1733), went to the university of Lund, he had to provide himself with a surname for registration purposes. He invented the name *Linnaeus* in allusion to a large and ancient tree of the small-leaved linden (*Tilia cordata* Miller, *T. europaea* L. in part), known in the Småland dialect as a 'linn', which grew on the family property known in the 17th century as Linnegard. Other branches of the family took the names *Lindelius* and *Tiliander* from the same famous tree. Linnaeus himself referred to this when he described *Tilia* in 1745 as being 'vastissima in pago Stegaryd Sunnerboae Smolandiae unde Tiliandri et Linnaei dicti'. The name *Linnaeus* was thus of Latin form from the beginning. Linnaeus, having been ennobled in 1761, first took the name of Carl von Linné in 1762, by which time he had published all of his most important works.

Nils Ingemarsson Linnaeus, like his relatives Carl Tiliander and Sven Tiliander, became a clergyman. In March 1706 he married Christina the daughter of another clergyman, Samuel Brodersonius, rector of Stenbrohult, in Småland, which is situated by an inlet of Lake Möcklen. Their son Carl was born on 23 May (13 May, Old Style) 1701 at Råshult nearby. Samuel Brodersonius died in December 1707 and in June 1708 his son-in-law Nils Linnaeus moved with his family into the rectory at Stenbrohult. Here young Linnaeus grew up amid a profusion of flowers, those native and wild in the marshland and meadows near the lake, those exotic and cultivated in his father's well-stocked rectory garden, the whole parish seeming 'as if adorned by Flora herself'. Nils Linnaeus grew more kinds of plants in his garden than anyone else in Småland and his son wrote in 1745 that 'this garden inflamed my mind from infancy onwards with an unquenchable love of plants'. In another way it also decisively influenced Carl Linnaeus's life-work. As a little boy he loved to work with his father in the garden and constantly asked him the names of plants and as frequently forgot them until his exasperated father told him that he would never be given any more names unless he remembered them. After that, according to Linnaeus himself, the heart and soul of the five-year-old boy were set on remembering the names. Thus began his long pre-occupation with the naming of organisms. It may well be that the rules in his *Critica botanica* for making generic names short, unambiguous, euphonious and memorable sprang ultimately from his difficulties with them as a child.

In 1714 aged seven he was sent for schooling at Växjö, where he remained until 1727. He did not prove an apt and brilliant pupil in a school intended mostly for would-be clergymen and state officials. According to a contemporary document summarized by Fredbärj in 1973, lessons in the Växjö high school began at 6 a.m. after prayers and hymn-singing and ended at 5 p.m.; of the forty-seven lessons each week, seventeen were devoted to Latin, fourteen to theology and ethics, four to Greek and nine to mathematics, physics and logic together. Linnaeus found this dry fare little to his taste but it gave him a good grounding in Latin, without which he could never have reached the learned world of Europe in later years. His parents

hoped he would become a clergyman; his teachers thought otherwise; they said he was most deficient in the subjects such as Greek, theology and eloquence most needed for a priest and he himself had no inclination that way. Fortunately indeed for Linnaeus and for posterity a distinguished local doctor Johan Stensson Rothman (1684–1762), while agreeing that Linnaeus could never become a priest, assured his parents that he would become a famous doctor and gave him personal instruction in botany and the principles of medicine. Rothman introduced him moreover to the sexuality of plants as expounded in Vaillant's *Sermo de Structura Florum* (1717), which had a dramatic effect on his adolescent imagination by revealing that sex comparable to that of human beings existed in flowers. Linnaeus took the comparison a long way, to the extent indeed of seeing the common marigold (*Calendula officinalis*) as a plant practising 'necessary polygamy' with 'the married females barren, the concubines fertile'; in other words, the ray florets of the flower head produced seeds but the disc florets did not. It led him to study flowers intimately, examining hundreds to discover how they managed their sexual affairs and procreation. He admitted in 1738 that 'their singular structure and extraordinary function attracted my mind' to enquire what Nature had hidden in them. They commanded themselves by the duty they perform since the propagation of plants rests entirely on them alone'. These observations, transformed into human terms, formed the basis of his so-called 'Sexual System' of classifying plants into major groups based on the numbers of their genital organs, i.e. the stamens and stigmas.

LUND, 1727–1728

As a country parson in a Småland parish Nils Linnaeus was a poor man and he and his wife feared that as a doctor their son might be just as poor despite the length and cost of a medical education. Carl Linnaeus was, however, determined on a medical career and in August 1727 he entered the University of Lund. The two Swedish Universities, Uppsala and Lund, were then at their lowest ebb, with a few aging and discouraged professors and little money for the maintenance of such studies as anatomy, botany and chemistry. Some private tuition was available but it usually cost too much for very poor students like Linnaeus. It is a characteristic of his life that at every period of crisis Linnaeus's impressive ability, industry and enthusiasm, despite the unfortunate first impression given by a certain brashness and egoism, brought influential people to his aid. He could never repay them with money but later he gratefully enshrined their names in the literature of botany: *Rothmannia*, *Stobaea*, *Celsia*, *Gronovia*, *Lawsonia*, *Cliffortia*, *Burmannia* and *Boerhavia* commemorate these friends and benefactors. In Lund the eminent physician and naturalist Dr Kilian Stobaeus (1690–1742) befriended him, let him live and eat in his house and attend his lectures without payment; he lent him books and showed him his collection of plants dried and glued to paper, something Linnaeus had never seen before. He soon began to make a similar herbarium of his own. Thus began the great Linnaean Herbarium of such outstanding international importance. To help name his plants gathered on excursions he bought M. D. Johren's *Vade Mecum Botanicum seu Hodegus botanicus* (1710), a guide

to Tournefort's system of classification, and thus began the formation of his rich natural history library belonging to the Linnaean Society. Linnaeus retained a lifelong gratitude to Stobaeus who 'loved me, not as a pupil, but as if I were his son'. Unfortunately in May 1728 Linnaeus became ill and after recovery returned to his family at Stenbrohult. He did not set foot in Lund again until twenty years later. Nevertheless Linnaeus's ten months in Lund under the affectionate and stimulating guidance of Stobaeus must be counted as possibly the most formative period in his career as a naturalist.

UPPSALA, 1728-31

During the summer of 1728 Rothman convinced Linnaeus and his parents that he should continue his medical studies not in Lund but in Uppsala where some twenty years ago Rothman himself had studied. Unfortunately Uppsala had also declined. The two revered professors in medicine, Olof Rudbeck the Younger (1660-1740) and Lars Roberg (1664-1742), had aged and could not obtain means for the proper maintenance of the university hospital; there was no longer any clinical teaching and the university botanic garden was poorly stocked. During the whole of his student years the future professor of botany never heard a lecture on botany! His limited money ran out and he must have thought how much better he had been in Lund with kind-hearted Stobaeus. Luckily another learned man Olof Celsius (1670-1756), a theologian and naturalist, noticed the hungry-looking student in the botanic garden and, presumably surprised to find a student studying, enquired what he was doing, then invited him home and gave him a free room and meals. As a New Year's gift Linnaeus presented Celsius with a manuscript dissertation, *Praeludia Sponsiorum Plantarum*, on the marriage of plants and their sexual analogies with animals. It came to Rudbeck's attention. He needed someone to give botanical instruction on the plants of the botanic garden to students at the end of the spring term and the author of this dissertation seemed the very man for the duty, even though still a student. Linnaeus, ever confident of his own abilities, assented and he lectured very successfully from May to July. Thus began his long fruitful career as a university teacher, from which no less than twenty-three of his own students became themselves professors.

In 1695 Rudbeck had travelled as a young man in Lapland and had made extensive botanical and zoological specimens and observations, together with drawings, in that vast then virtually unknown wilderness. Most of these perished in the terrible fire of 1702 which raged across Uppsala and destroyed three-quarters of its buildings. Thereafter he lost heart and turned his attention largely to philology and raising a family, which numbered 24 children, probably an academic record, by Linnaeus's time in 1730. He invited Linnaeus to live in his house as tutor to his four youngest sons, with opportunities to use his rich library. Meanwhile Linnaeus, dissatisfied with Tournefort's widely used classification of plants, had begun to make one of his own based on the numbers of stamens and stigmas and to describe the genera methodically. He used his time diligently, beginning in Rudbeck's house the works later published as *Bibliotheca botanica* (1736), *Critica botanica* (1737),

Genera Plantarum (1737), *Classes Plantarum* (1738), and also studying birds and insects. Thus by the age of 24 Linnaeus had laid the foundations for all his later work.

FRIENDSHIP WITH PETRUS ARTEDI, 1729-1735

When Linnaeus arrived in Uppsala in 1728 he learned about another medical student interested in natural history, Petrus Arctaedius, who had begun his studies there four years earlier but was absent because of his father's illness. His family name had apparently been coined by his grandfather, a clergyman like his father, when dwelling in northern Sweden, but grandson Petrus altered it to the Italian-sounding Artedi when a student at Uppsala. He was born in 1705. Living near the sea at Nordmaling, Västerbotten, on an inlet of the Gulf of Bothnia, he became especially interested in fishes, but his interests were wide and embraced alchemy as well as natural history. On his return to Uppsala in 1729 he and Linnaeus became close friends. Their talents and interests complemented one another. Together they worked out a plan for studying and documenting the natural world between them, Artedi to deal with fishes, reptiles, amphibians, the Umbelliferae among plants, Linnaeus with birds, insects and the plant world in general. Artedi possessed a very thorough, methodical, philosophical and scholarly mind and was well versed in modern languages and the classics. There would seem little doubt that the methods for the diagnosis, description and naming of organisms (apart from the binomial system of nomenclature) which Linnaeus used were developed by these two young men in co-operation. Unfortunately Artedi was drowned on 28 September 1735 by falling into an unlit canal at night in Amsterdam; science lost one who might have proved the greatest systematic zoologist of the eighteenth century. Henceforth the task of revealing the works of the Creator in an orderly manner was to be Linnaeus's alone. Artedi had left in manuscript a very detailed monographic work on fishes and, edited by Linnaeus and entitled *Ichthyologia sive Opera omnia de Piscibus*, this was published in Leiden in 1738.

LAPLAND JOURNEY, 1732

As they sat by the fire in 1731, during the long winter nights, Rudbeck now seventy years old talked to Linnaeus about Lapland, its wildness and strangeness, the ways of the Lapps, its birds and its flowers, and filled his young listener with eagerness to explore its natural history. The problem was to raise the money for so long a journey. Linnaeus, anticipating the methods of later student fund-raisers, drew up a memorandum emphasizing both the desirability of a naturalist visiting Lapland and the attributes requisite in such a person, from which it would appear that the most suitable one for the task would be no other than Linnaeus himself. He accordingly offered his services and asked the Royal Society of Sciences at Uppsala (*Regia Societas Scientiarum*) for 600 copper dalers (equivalent to £15 sterling in 1935). This was certainly a modest sum to cover a journey of about 3000 English miles (5000 km) lasting from 12 May to 10 September 1732. Even Linnaeus, thrifty Smålander though he was, found in fact that it cost more. He

travelled along the coast of the Gulf of Bothnia to Umeå, then went inland by way of Lycksele to Lycksmiren and then back to Umeå, then along the coast northward to Lulea, then across Norrbotten by way of Jokkmokk and Kvickjokk to Rörstad on the Norwegian coast and back again to Lulea. From Tornio he then went northward along what is now the Finnish frontier to Kengis and Vihangl and then back to Tornio. The rest of his journey was southward along the Finnish coast to Turku (Åbo) and by sea back to Sweden.

Linnaeus kept a journal of his Lapland journey but never published it. An English translation entitled *Lachesis Lapponica or a Tour in Lapland* was published in 1811, the Swedish original not until 1888 and 1913. This abounds with interesting observations. The journey was the most adventurous that Linnaeus ever made; it has been assessed by his fellow-countrymen as the most fruitful single scientific expedition ever made in Sweden both for its immediate botanical results and its influence on Linnaeus's later career. It led to the publication in 1737 of his *Flora Lapponica* which is of prime importance for the nomenclature of Arctic-Alpine species; Linnaeus's Lapland specimens, on which this was based, are in Paris.

Linnaeus's subsequent career falls into five periods, the main events of which may be summarized chronologically as follows:

FURTHER STUDENT YEARS AT UPPSALA, 1733-35

1733. Linnaeus lectured on mineralogy at Uppsala; death of Christina Brodersonia (1688-1733), Linnaeus's mother.
1734. Linnaeus lectured on dietetics at Uppsala; travelled through Dalarne (Dalecarlia); at Christmas met Sara Elisabeth Moraea (1716-1806), daughter of town physician of Falun.
1735. Linnaeus engaged on 23 January 1735 to Sara Lisa; left Sweden in April 1735 in order to obtain a doctor's degree at the accommodating but now extinct Dutch university of Harderwijk and to get his works published.

YEARS ABROAD, MOSTLY IN HOLLAND, 1735-38

1735. Linnaeus travelled through north Germany and Denmark to Holland; awarded degree of doctor of medicine at Harderwijk; befriended by J. F. Gronovius, Boerhaave and J. Burman, in whose house he lived; published *Systema Naturae*.
1736. Linnaeus published *Bibliotheca botanica*, *Fundamenta botanica*; moved to George Clifford's house at Hartekamp near Haarlem as his resident physician and naturalist; visited England at Clifford's expense; Petrus Artedi accidentally drowned at Amsterdam, his manuscript on fishes bought by Clifford and given to Linnaeus.
1737. Linnaeus published *Genera Plantarum*, *Flora Lapponica*, *Critica botanica*; completed manuscript of *Hortus Cliffortianus* listing the plants of Clifford's garden with detailed synonymy, the best illustrated and one of the most important of Linnaeus's publications; edited Artedi's material.
1738. *Hortus Cliffortianus* and Artedi's *Ichthyologia* published; Linnaeus visited Paris; returned to Sweden.

MEDICAL PRACTICE, 1738-41

1738. In September 1738, aged 31, set up in practice as a physician in Stockholm; befriended by the politician Count C. G. Tessin (1695-1770).
1739. Linnaeus made first President of Swedish Royal Academy of Sciences, of which he was a founder member; appointed physician to the Admiralty; on 26 June 1739 married Sara Lisa; [Tessin made leader of the Hats political party, Marshal of Swedish Diet].
1740. Linnaeus published second edition of *Systema Naturae*.
1741. Carl Linnaeus the younger born at Falun on 20 January. Linnaeus appointed professor of medicine and botany at University of Uppsala; travelled through the Baltic islands of Öland and Gotland to survey their natural history, economic products, etc.

PROFESSORSHIP AT UPPSALA, 1741-72

1741. On 25 October Linnaeus, aged 34, gave inaugural address at Uppsala on the necessity of travelling within one's own country; [death of Queen Ulrica Eleanora].
1742. Linnaeus restored Uppsala Botanic Garden.
1743. Elizabeth Christina (1743-82), Linnaeus's eldest daughter, born; [Adolf Frederick (1710-71) of Holstein-Gottorp elected as successor to Swedish throne; part of Finland ceded by Sweden to Russia].
1744. [Marriage of Adolf Frederick to Louisa Ulrica (1720-82)].
1745. Linnaeus published *Flora Suecica, Ölandska och Gotlandska Resa*, a very interesting account of his 1741 journey, with first use of binomial nomenclature for species in the index.
1746. Linnaeus travelled through Västergötland; published *Fauna Suecica*; in September 1746, aged 39, hard at work on manuscript of *Species Plantarum*.
1747. Linnaeus honoured with title of Archiater (chief physician); published *Flora Zeylanica*, an important work on the plants of Ceylon, and *Wästgötaresa*, dealing with his Västergötland journey of 1746.
1748. Linnaeus published *Hortus Upsaliensis*; reached 'Tetradynamia' in manuscript of *Species Plantarum*, then compelled by other activities and the strain of overwork to put it aside for a year.
1749. Linnaeus published *Materia medica, Vol. I, Amoenitates academicae, Vol. I, Pan Suecicus*, a thesis using binomial nomenclature for species tested as fodder for livestock; Louisa (1749-1839), Linnaeus's third daughter born (the second, Sara Magdalena, died in 1744, the year of her birth).
1750. Linnaeus dictated *Philosophia botanica* to his student Pehr Löfing when bed-ridden and too unwell to write; resumed work on *Species Plantarum* but did little.
1751. Linnaeus published *Philosophia botanica*; Kalm returned from America with exciting specimens; Sara Christina (1751-1835), Linnaeus's fourth

- daughter, born; in June 1751 again resumed work on *Species Plantarum*; [death of Frederick I, accession of Adolf Frederick and Louisa Ulrica as King and Queen of Sweden].
1752. Manuscript of *Species Plantarum* completed; Osbeck returned from China.
1753. Linnaeus, aged 46, published *Species Plantarum*, starting point of modern botanical nomenclature.
1754. Linnaeus published *Genera Plantarum*, 5th ed.
1756. [Outbreak of Seven Years War.]
1758. Linnaeus made Knight of the Polar Star; published *Systema Naturae*, 10th ed., Vol. 1, starting point of modern zoological nomenclature, Löfling's *Iter Hispanicum*; purchased Hammarby.
1759. Linnaeus published *Systema Naturae*, 10th ed., Vol. 2.
1761. Linnaeus ennobled, aged 54.
1762. Linnaeus published *Species Plantarum*, 2nd ed., Vol. 1; took name of Carl von Linné; built house on his personal estate at Hammarby.
1763. Linnaeus published *Species Plantarum*, 2nd ed., Vol. 2; excused professorial duties on grounds of ill-health; Carl von Linné, the younger, aged 22, appointed in his place.
1764. Linnaeus published *Genera Plantarum*, 6th ed.; suffered from violent attack of pleurisy; celebrated Silver Wedding.
1766. Big fire in Uppsala; Linnaean collections evacuated to a barn.
1767. Linnaeus published *Mantissa Plantarum* as an appendix to *Systema Naturae*, 12th ed., Vol. 2.
1768. Linnaeus began to build museum at Hammarby to house collections; published *Systema Naturae*, 12th ed. Vol. 3.
1769. Hammarby museum completed.
1770. [Death of Count Tessin.]
1771. Linnaeus published *Mantissa Plantarum alter*; [death of Adolf Frederick; accession of Gustaf III].

DECLINE AND DEATH, 1772-78

1772. Linnaeus's health failed.
1773. Linnaeus weakened by a stroke.
1774. *Systema Vegetabilium* published under editorship of J. A. Murray.
1778. Linnaeus, aged 70, died on 10 January 1778; buried in the Cathedral at Uppsala on 22 January.

ACHIEVEMENTS

Linnaeus is commemorated nowadays primarily as the great biological name-giver of the 18th century; the abbreviation 'L.' for Linnaeus appended to about twelve thousand scientific names of plants and animals indicates the immensity of his achievements, for such names at their publication had to be associated with descriptive information derived from his study of specimens and earlier literature. He accomplished this massive task through his remarkable

mental tenacity and stamina allied to a strong visual memory and a very methodical and practical systematizing cast of mind never straying far from the concrete. This is evident not only in his taxonomic works but even more vividly in the journals of his travels, notably his *Öländska och Gotlandska Resa Åhr 1741* (1745), translated into English as Linnaeus's *Öland and Gotland Journey 1741* (*Biol. J. Linn. Soc.*, 5; 1973) written at the height of his powers, when 34 years old. It includes observations on the economy, products, buildings, natural history, antiquities, domestic furniture, customs, runic inscriptions and folk-lore of the Baltic islands of Öland and Gotland; it well exemplifies his wide-ranging curiosity. In its index Linnaeus first used binomial nomenclature for species. The emphasis here and all the time is on firsthand observation and simple direct expression, as in his purely scientific works. Nevertheless, because the visual world made such a deep sensual impression upon his romantic, aesthetically sensitive, mind, he transformed the world of facts into dramatic colourful concrete pictures, as exemplified in his so-called 'Sexual System' of classification. The typification of a Linnaean binomial name is essentially the recognition of the specimen or illustration, the visual element, which gave Linnaeus the information expressed in a diagnostic name such as *Convolvulus foliis subrotundis, caule repente*. These diagnostic names served as concise guides to identification. They enabled the careful user to distinguish species within a genus and even, in association with Linnaeus's descriptions of genera and higher groups, to distinguish a given species from every one then known. Both genera and species needed convenient memorable names for everyday use and such names Linnaeus also provided in his *Species Plantarum, Systema Naturae*, 10th edition and other works from 1753 onwards.

This innovation in nomenclature has proved Linnaeus's most lasting, influential and important contribution to biology but many of his contemporaries received neither this nor his classification with joy. They found his 'Sexual System' repugnant and unnatural: they objected strongly to his changing of well-established generic names and considered his binomial nomenclature for species unnecessary and uninformative, although they welcomed and accepted his diagnostic phrase-names. Even so well-disposed and kindly a correspondent as the Quaker merchant Peter Collinson gently reprimanded him on 20 April 1754: 'My dear friend, we that admire you are much concerned that you should perplex the delightful science of Botany with changing names that have been well received, and adding new names quite unknown to us. Thus, Botany, which was a pleasant study and attainable by most men, is now become, by alterations and new names, the study of a man's life, and none now but real professors can pretend to attain it. As I love you, I tell you our sentiments'.

Linnaeus's nomenclatural preoccupation may have dominated his activities but it was far from excluding others. Thus his dissertations, collected in the *Amoenitates Academicae*, cover a wide range of subjects. His *Philosophia botanica* (1751) helped to standardize botanical taxonomic procedure and terminology: many terms were given their present application by Linnaeus. He took from pharmacy the alchemical signs ♂ (Mars, iron) and ♀ (Venus, copper) and used them as male and female symbols.

He maintained a very extensive correspondence with naturalists all over Europe and students came to him and Rosén at Uppsala from many countries as they had earlier gone to Boerhaave at Leiden. Twenty-three of Linnæus's students themselves became professors and thus spread his methods widely. The Linnaean classification of plants and animals provided a framework of knowledge into which information about hitherto unknown organisms could be fitted. Thus it provided a stimulus for further investigation and led his students to travel to remote lands for natural history purposes. A number of these Linnaean 'apostles', Anders Berlin, Pehr Forsskål, Fredrik Hasselquist, Pehr Löfling and Christopher Tärnström, alas, died in the cause of science far from home, but others, including Pehr Kalm and Carl Peter Thunberg, returned laden with specimens for research. Two of them, Daniel Solander and Anders Sparrman, even sailed round the world with Captain Cook and contributed substantially to the scientific results of his first and second global voyages.

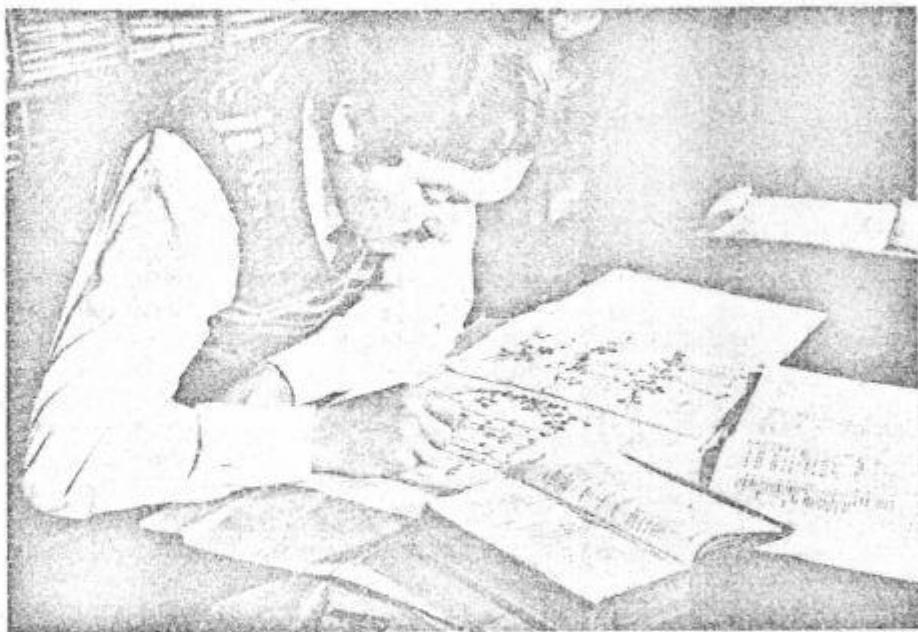

The Linnaean Collections

Linnaeus was justly proud of his library and his natural history collections and regarded them as valuable financial assets for his heirs. He declared in his 'Voice from the grave to her who was my dear wife' that 'invaluable as they [his herbaria] are, they will increase in value as time goes on. They are the greatest the world has ever seen. Do not sell them for less than 1000 ducats'. On his death in 1778 his son Carl received his library and natural history collections but not the herbarium. Relations between Mrs Linnaeus and the son were far from happy and she locked the herbarium in the unheated and damp little museum at Hammarby to prevent his access to them. When the herbarium came ultimately into his hands, he found that rats, mice and mould had caused much damage. It seems probable that Linnaeus kept his collection of Swedish plants apart from his general herbarium and that this was almost totally destroyed, for there are surprisingly few wild Swedish specimens in the Linnaean Herbarium.

On the death of Carl the younger in November 1783, the Linnaean collections became the property of his mother, who needed money to provide dowries for his four sisters. Unable to find a Swedish buyer willing to pay as much as the 1000 guineas sterling offered by the twenty-four-year-old English medical student and naturalist, James Edward Smith of Norwich, for the Linnaean collections, J. C. Acrel acting for Mrs Linnaeus, sold them to Smith and they were shipped to London in September 1784, to the dismay of many Swedes who naturally considered the sale a national scandal.

Part of Linnaeus's library with his herbarium shelved below.

Linnaeus's herbarium—still regularly consulted by botanists from around the world.

At the time Smith acquired the collections they comprised:

Herbarium of ca. 14,000 plants
Birds in glass boxes, 45 specimens
Dried fishes, 158 specimens
Insects, 3,198 specimens
"Conchylia", 1,564 specimens
Corallia, large number—but not counted
Minerals, 2,424 specimens
Library, ca. 1,600 volumes
Manuscripts and papers relating to almost every aspect of his scientific work,
together with ca. 3,000 letters.

Smith must have disposed of the birds for nothing more is known of them. He sold the minerals in 1796 (as recorded in the sale catalogue *Linnean Cabinet of Minerals—A Catalogue of the genuine and entire Collection of the late celebrated Sir Charles Linné . . . which will be sold by Auction, by Mr. King, at his Great Room, King Street, Covent Garden, on Tuesday, March 1, 1796 &c.*)

The Linnaean collections, something diminished in content, came to the Linnean Society when the library and collection of Sir James Edward Smith were purchased in 1829 from Smith's widow, so that this important material might be made permanently available to scientific workers. The Society paid £3150, a vast sum then, and incurred a heavy debt for the benefit of science which handicapped it for many years and was not paid off completely until 1861. It had already built up a museum and library by then—books were being acquired within weeks of foundation in 1788—and the Linnaean and Smithian collections were added to these. A general account of the acquisition of the Linnaean materials by B. D. Jackson, will be found in *Proc. Linn. Soc. London*, 1887–88; 18–34. Smith's correspondence about the original purchase is printed in *Memoir and Correspondence of the late Sir J. E. Smith*, 1; 91–134 (1832). B. D. Jackson's 'Notes on a catalogue of the Linnean herbarium', *Supplement to Proc. Linn. Soc. London*, 134 (1921–2), forms an historical introduction to S. Savage's *Catalogue of the Linnaean Herbarium*, (1945). W. T. Stearn's *Introduction to the 'Species Plantarum'*, 103–24 (1957) provides further information. An historical introduction and partial catalogue of zoological specimens is provided by B. D. Jackson, 'Catalogue of the Linnean specimens of Amphibia, Insecta, and Testacea noted by Carl von Linné', *Supplement to Proc. Linn. Soc. London*, 125 (1912–13). This is supplemented by A. C. L. G. Günther, [Catalogue of the fishes in the Linnaean collection], *Proc. Linn. Soc. London*, 1898–9; 15–38; S. Hanley, *Ipsa Linnaei conchylia, the shells of Linnaeus determined from his manuscripts and collection* (London, 1855); S. P. Dance, 'Report on the Linnaean shell collection', *Proc. Linn. Soc. London*, 178; 1–24 (1967); C. H. C. Brunton & others, 'Brachiopods in the Linnaean collection', *Ibid.*; 161–83; and M. C. Day & M. G. Fitton, 'Discovery in the Linnaean collection of type-material of insects described by Johann Reinhold Forster, with notes on the Hymenoptera', *Biol. J. Linn. Soc.*, 9; 31–43 (1977). Other publications relevant to the Linnaean zoological collections in London and Uppsala are listed by Stearn in W. Blunt, *The Compleat Naturalist*, 250–1 (1971).

No handlist of Linnaeus's manuscripts has ever been prepared for publication though a draft list is available in the Society's library. His books were catalogued and entered in the various editions of the Society's library catalogue, the most recent being that of 1925, where Linnaeus's books can be identified by the Gothic L printed against the entries. Linnaeus's medical books were returned to Sweden in 1894 and had apparently never been catalogued as they do not appear in the 1866 edition of the Library Catalogue. There is, however, a typewritten handlist in the Library. For a general account of the society's history, see A. T. Gage, *A History of the Linnean Society of London* (1938).

In 1970 a special strongroom was constructed in the basement of the Society's rooms at Burlington House with very generous Swedish, American and other financial aid to ensure the safe keeping of these literally priceless collections, and they were moved into it in 1971.

The Linnean Society is proud to have the responsibility of maintaining the Linnaean zoological and botanical collections and library for the benefit of science and upholding the tradition of international scientific interest so well manifested by Linnaeus himself.

THE LINNAEAN HERBARIUM

Linnaeus began to form his herbarium when a student at Lund in 1728 under the instruction of Kilian Stobaeus and he continued to add and discard specimens of dried plants throughout his life. This remains the most important personal herbarium amassed in the 18th century on account of its intimate association with Linnaeus's botanical works although smaller than that of Sir Hans Sloane. He used it continuously when preparing these works and it must accordingly often be consulted when ascertaining today the correct application of scientific names published in them. The specimens frequently provided the information embodied in his diagnostic phrase-names. When he knew a particular species only from the specimen in his herbarium, that specimen must be regarded as the holotype of the Linnaean name based upon it, e.g. Linn. Herb. 655.26 for *Potentilla canadensis* L. collected by Kalm. More often he knew a species both from his herbarium material and from descriptions and illustrations published by his predecessors; then his specimen may be eligible for choice as the lectotype, e.g. Linn. Herb. sheet 858.72 for *Geranium lucidum* L. Sometimes, however, Linnaeus knew species only from illustrations and descriptions in the literature or from specimens in other herbaria. Thus it is unwise indeed uncritically to accept a specimen in the Linnaean Herbarium as the type of a Linnaean name simply because it is in that herbarium: Linnaeus may have added it after the publication of the name. Nevertheless the Linnaean Herbarium must always be considered when typifying Linnaean botanical names.

During the Second World War the Linnaean Herbarium was evacuated to the Tring Museum of the British Museum (Natural History) and photographed there in 1941. It was photographed again in 1959, for a microfiche edition published by the International Documentation Centre.

SOME NOTABLE POSSESSIONS OF THE LINNEAN SOCIETY

The Linnean Society of London is Britain's oldest biological society and, although the maintenance of the Linnaean library and specimens, which include plants, fishes, insects and shells, is but one of the Society's commitments and activities, it is nevertheless among the most important on account of the continuing international relevance of these collections to biological nomenclature as their frequent consultation by research workers and numerous enquiries from overseas testify. In addition to these, the Society possesses many items of interest relating to its own history and also manuscripts of other naturalists (Nos. 33-52). Accordingly the present booklet cannot do more than list some representative examples, with emphasis naturally on Linnaean relics (Nos. 4-32, 53).

Some Portraits of Linnaeus

1. J. E. REHN'S DRAWING OF LINNAEUS in 1747, when he was 40 years old, from which a lithographic copy was made, portrays him at the time when he was working day and night on his *Species Plantarum*.
2. CARL FREDRIK INLANDER'S BEAUTIFUL MEDALLIC PORTRAIT OF LINNAEUS made in 1773, was considered by his former student Daniel Solander to give a better idea of the man than any of the better known paintings. The replica belonging to the Society was presented by Sir Joseph Banks in 1790. Inlander's design was used by Wedgwood for the well known cameo portrait manufactured in 1775, and is on the cover of this booklet.
3. J. F. KJELLBERG'S FINE STATUE OF LINNAEUS was unveiled in Stockholm in 1884. Only three bronze casts were made from the artist's model for the statue of which the Linnean Society possesses one (see frontispiece).

Some Manuscripts of Biographical and Scientific Interest from the Linnaean Collection

4. "DE INGRESSU AD BOTANIAM [sic] A. DR. ROTHMAN EXHIB." Dating from late 1726 or early 1727 when Linnaeus was only 19 years old, this is the earliest example of his botanical writings. Written on five blank pages of an older medical manuscript, it also contains his notes of John Rothman's private lectures on medicine given at Växjö (Wexiö) prior to his studentship at Lund which commenced in August 1727. From Rothman he learned the essentials of Vaillant's exposition of the sexual function of the stamens and pistil of flowers published in his *Sermo de Structura Florum* in 1718.
5. ANNOTATED COPY OF JOHRENIUS'S VADE MECUM BOTANICUM. Linnaeus habitually analysed, annotated and often interleaved the books in his possession and the early example shown dates from 1727-28. During his brief stay at the University of Lund he used an interleaved copy of Johrenius's *Vade Mecum Botanicum* (1710) to record his botanical observations. The front fly-leaves contain manuscript notes on Tournefort's life and sketches of flowers illustrating his system of classification. (See O. Gertz, 'En Linnéhandskrift [1727-8]. Linnés första kända

anteckningar till Smålands och Skånes flora': *Studier tillägnade Josua Mjöberg, &c.* 61-92; Lund, 1926).

6. LINNAEUS'S ANNOTATED COPY OF PLUKENET'S PHYTOGRAPHIA.
Another annotated book of interest is a copy of Leonard Plucken's *Phytographia* (1691-6) which formerly belonged to Olof Rudbeck and came early into Linnaeus's possession. He has added his manuscript determinations against the illustrations throughout; the specific epithets were apparently added at a later date than the generic names. For a general account of annotated books in Linnaeus's library, see S. Savage, *Synopsis of the annotations by Linnaeus and his contemporaries in his library of printed books*, (*Cat. of MSS. Linn. Soc. London*, 3: 1940).
7. LINNAEUS'S NOTES ON SWEDISH BIRDS.
An interesting relic of Linnaeus's student days at Uppsala is the series of notes on Swedish birds taken down from lectures given by Olof Rudbeck the Younger in 1728-9. (See E. Lönnberg, 'Linnaei anteckningar efter Olof Rudbeck d. y: s föreläsningar om Svenska fåglar,' *Svenska Linneasällskapets Årsskrift*, 15; 41-75; 1932).
8. LINNAEUS'S EARLY ANNOTATION OF A LOCAL FLORA.
Early evidence of Linnaeus's systematic mind is provided by his annotations in the works of other botanists. An interleaved copy of J. Linder's *Flora Wiksburgensis* (1716) has the plants numbered from 1 to 547 for reference, and the synonyms of Tournefort, Bauhin and others provided by Linnaeus when aged about 21.
9. TWO EARLY MANUSCRIPTS ARRANGED ON TOURNEFORT'S SYSTEM.
Before his firm adoption of the 'Sexual System' in his 1731 manuscripts Linnaeus had prepared two works based on Tournefort's system—the *Spolia botanica* (1729) and the *Hortus Uplandicus* (1730). Although by this time well aware of the content of Vaillant's *Sermo* (1717) on the sexual function of stamens and pistil he did not see a copy until several years later.
10. FIRST DRAFT OF THE FUNDAMENTA BOTANICA.
Linnaeus's little book of botanical aphorisms, the *Fundamenta Botanica* (1735), originated in 1730 whilst he was lecturing to medical students in the botanic garden at Uppsala, the first draft reveals his early interest in formulating rules for the classification of plants. The work went through three manuscript versions before it achieved its published form and these aphorisms were to be given much more detailed treatment in his *Philosophia Botanica* (1751).
11. EARLY MANUSCRIPTS ARRANGED ON THE SEXUAL SYSTEM.
Two early manuscripts formed the basis for Linnaeus's lectures to medical students at the Uppsala botanic garden, the *Adonis Uplandicus* (1731) and the *Hortus Uplandicus* (1731). He had been appointed as 'Docent' *ad interim* by Olof Rudbeck the Younger and in his lectures he reveals his early adoption of the 'Sexual System' of plant classification.
12. LINNAEUS'S JOURNAL OF HIS LAPLAND TOUR.
Linnaeus's most famous travel journal, the *Iter Lapponicum* of 1732, pulsates with the energy and enthusiasm of this early journey and its pages, packed with notes, comments, and sketches, reveal more of Linnaeus's restless enquiring mind than most of his other manuscripts. The work was published in Troilius's English translation by James Edward Smith in 1811, the Swedish original not until 1888. (The

collection also includes MSS of Linnaeus's travel journals for Dalecarlia 1734, Öland and Gotland 1741; an annotated translation of his *Öländska och Gothländska Resa* was published by the Linnean Society in 1973.)

13. LINNAEUS AND BURSER'S HERBARIUM.
Joachim Burser (1583–1639), a pupil of Caspar Bauhin, left a herbarium of twenty-three volumes, the specimens named and arranged according to Bauhin's *Pinax* (1623). He became a professor of medicine and botany at Sorø in Denmark where he died. His herbarium was seized by the Swedish army as war-booty in the war of 1657–8 with Denmark and taken to Uppsala where it is now preserved in the Botanical Museum there. Linnaeus found it of great value for establishing the application of Bauhin's names and placing them in synonymy. Linnaeus's manuscript on the Burser herbarium ca. 1733–4, exists in the Linnaean library. (See S. Savage, *Determinationes in Hortum Siccum Joachim Burseri; Cat. of MSS, Linn. Soc. London*, No. 2.; 1937).
14. LINNAEUS'S AUTOBIOGRAPHIES.
No 18th-century naturalist has had his life studied so minutely or recorded so extensively as Linnaeus, a process he began himself. Ever conscious of his own achievements and not inhibited by undue modesty from declaring them, Linnaeus compiled several autobiographical manuscripts. Even at the age of 27 he wrote a sketch down to 17 August 1734, this is bound with his copy of Scheuchzer's *Agrostographici Idea*. A later and much more extensive text (to about the year 1769) exists in a transcript in the hand of J. Lindvall with corrections by Linnaeus. (For a comprehensive record of Linnaeus's autobiographies see *Vita Caroli Linnaei: Carl von Linnés själv-biografier*, utgivna av E. Malmeström och A. H. Ugglå; Stockholm, 1957).
15. LINNAEUS'S LECTURES ON MINERALOGY, 1734.
In 1733 Linnaeus went to Falun (Fahlun), an important mining centre, to further his knowledge of mineralogy. After an interlude during which he made his expedition to Dalarne (Dalecarlia), he returned to Falun and, at the request of Johan Browallius, gave public lectures on mineralogy. These, accompanied by experiments in assaying, were well attended. Linnaeus entitled his lecture notes "Vulcanus Docimasticus" but did not publish them. (See G. A. Granstrom, *Caroli Linnaei Vulcanus Docimasticus*, Uppsala, 1925. *Skrifter utg. af Svenska-Linnesällskapet*, No. 2.)
16. ALMANACK FOR 1735 ANNOTATED BY LINNAEUS.
1735 was a most eventful year in Linnaeus's life and by a happy circumstance his day-to-day movements are recorded in an Almanack which he kept. June was a particularly momentous month, as three entries show: 12th Linnaeus created Doctor at Harderwijk; 27th Artedi arrived at Leiden, saw the Arboretum of Boerhaave; 30th sent *Systema Naturae* to the press. (See N. Wallich's translation in the Society's *Proceedings*, 2: 5–12; 1848).
17. THE FAMOUS SYSTEMA NATURAE OF 1735.
The first edition of Linnaeus's *Systema Naturae* (1735), together with the *Methodus* (1736), was published in Leiden at the expense of his friends J. F. Gronovius and Isaac Lawson. Its few leaves set out tabular systems for the three kingdoms of nature and also included the 'Sexual System' of plant classification for the first time in print. Facsimiles of this cardinal, very rare and expensive work were published in 1907.

1960, 1964, and 1978. Gronovius cut up undistributed copies and mounted his herbarium specimens on the blank reverse side of the sheets, which are now in the British Museum (Natural History). The tenth edition, vol. I (1758) is the starting point of modern zoological nomenclature.

18. LINNAEUS'S ADDRESS WHILE STAYING IN LONDON.
Linnaeus's address whilst staying in London in 1736, written on the cover of a letter from Boerhaave (with 2 of his seals) "Lodging at the Swedish Minister in Princes Square, Ratcliff Highway". As Linnaeus spoke no English, probably he kept this note of his address with him during his stay in case he had to seek help in finding his way home. In addition there are rough notes of his movements in Holland immediately prior to crossing to England in 1736.
19. FLORA LAPONICA AND THE BEGINNINGS OF BINOMIAL NOMENCLATURE.
Flora Lapponica (1737), compiled by Linnaeus at the age of 30, contains the botanical results of his 1732 journey and is important for the typification of names of Arctic-Alpine species. Although the nomenclature used in the body of the text consists of lengthy specific diagnostic phrases, the index used some two-word specific designations to refer to these phrases—names in certain genera (e.g. Gramen). At this stage binomial nomenclature for species would seem to have no more than a space-saving function for indexing as also in his later *Öländska och Gotländska Resa* (1745).
20. LINNAEUS AND CASPAR BAUHIN.
Linnaeus's copy of Caspar Bauhin's *Pinax*, ed. alt. (1671) with annotations. This encyclopaedic arrangement of plants based on what were regarded as natural affinities is additionally valuable in that it provided a detailed synonymic catalogue to earlier nomenclature. Linnaeus received this copy in 1730 from another student as payment for tuition and added his early determinations of the genera and later, when working on the *Species Plantarum*, his specific names.
21. LINNAEUS'S FIRST ATTEMPT AT A SPECIES PLANTARUM.
Linnaeus's first attempt at a *Species Plantarum* was made by modifying the text of a copy of his *Genera Plantarum* (1737). Interleaved and extensively annotated this copy has a manuscript title page by Linnaeus using the title 'Species Plantarum' for the first time. The title also bears a note by Linnaeus that he gave this copy to his son in November 1752, when the boy was only 11 years old. It is especially important for his notes made in Holland on the West Indian plants illustrated by Charles Plumier, whose unpublished drawings had been copied for Boerhaave. (See R. M. Polhill & W. T. Stearn in *Taxon*, 25: 323-5; 1976).
22. AN EARLY DRAFT OF SPECIES PLANTARUM.
The *Species Plantarum*, as published in 1753, was preceded by an early draft presented in quite a different style, dealing with some 600 genera, and dating from ca. 1746-8. In only a few instances are the binomial specific names inserted. (See J. M. Hulth, 'Linnés första utkast till Species Plantarum', *Svenska Botanisk Tidskrift*, 6; 627-31; 1912).
23. LINNAEUS ON PEARLS.
About 1747 Linnaeus made the remarkable discovery that it was possible artificially to stimulate living river mussels to produce natural pearls over a period of about five years. He failed in 1748 to interest the Swedish government in his discovery but

thirteen years later the matter was revived. On that occasion the State Chamber of Commerce requested an account of the discovery and Linnaeus complied. A copy of the document, in the hand of his amanuensis with additions by Linnaeus, is still preserved. For this discovery the Government awarded him 3,000 platar in exchange for his patent together with the promise that he should be able to nominate his successor as Professor at Uppsala. (See W. A. Herdman, 'Linnaeus on artificial pearl formation', *Proc. Linn. Soc. London*, 1904-5; 22-30).

24. LINNAEUS'S MATERIA MEDICA.

Linnaeus's copy of his *Medica Materica, Liber I, De Plantis* (1749). This compendium provided an elaborately classified and indexed, but invaluable concise, account of medically important plants, with information on country of origin, medicinal properties, dosages, &c. In this copy he has almost doubled the extent of the information with interleaved manuscript additions and at the end of the volume he has provided a manuscript *Pharmacopæta Holmensis*. The next edition was published in 1772 and five had appeared by 1787.

25. PAN SUECICUS AND THE INTRODUCTION ON BINOMIAL NOMENCLATURE.

Ever alive to the practical applications of natural history knowledge Linnaeus published *Pan Suecicus* as a dissertation in 1749 defended by the student N. L. Hesselgren. It presented in tabular form the results of over 2,000 experiments made with plants as fodder for cattle, goats, sheep, horses and pigs. It refers to these plants by the running number for species used in his *Flora Suecica* (1745) but also designates them by the generic name and an added epithet thus anticipating his later consistent binomial nomenclature for all species. The manuscript of the work is in the British Library (Egerton MS 2039). (See W. T. Stearn, *Introduction to the 'Species Plantarum'* 68-71; 1957; J. Ramsbottom, 'Caroli Linnaei Pan Suecicus', *Trans. Bot. Soc. Edinburgh*, 38: 151-67; 1959).

26. LINNAEUS'S EDITION OF ARTEDI'S ICHTHYOLOGY.

The brilliant young ichthyologist Petrus Artedi lost his life by drowning in 1735 in Amsterdam, leaving unfinished botanical and zoological manuscript works. His close friend Linnaeus edited and published the *Ichthyologia* in 1738. His copy, with binomials added in manuscript, also bears a copy of the epitaph on Artedi by A. Celsius which George Shaw translated into English:

Here lies poor Artedi, in foreign land pyx'd,
Not a man nor a fish, but something betwixt,
Not a man, for his life among fishes he past,
Not a fish, for he perished by water at last.

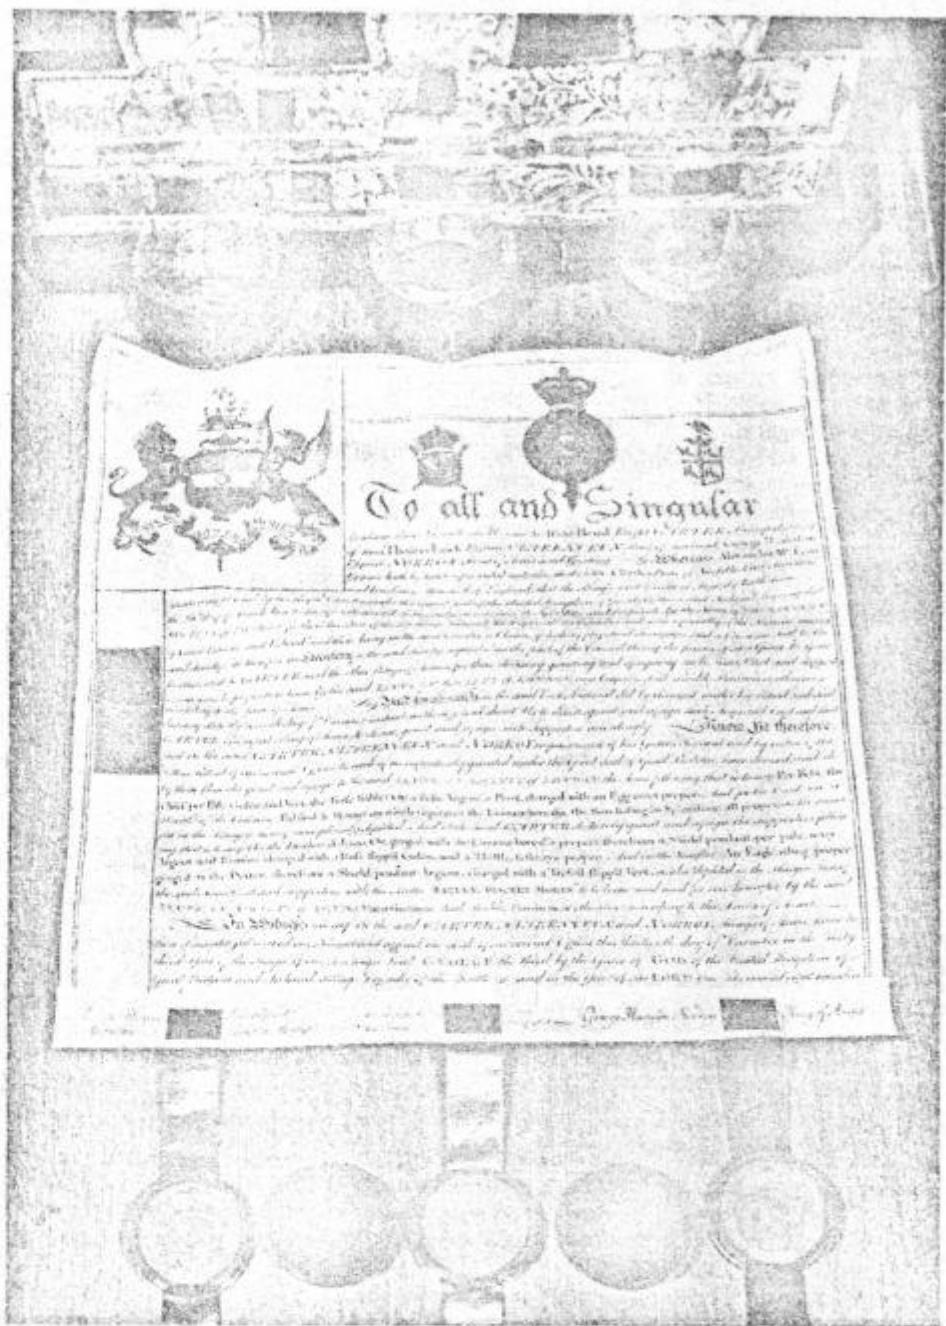

Linnaeus's knowledge of fishes was largely derived from Artedi's very thorough and scholarly work.

27. LINNAEUS AND THE NATURAL SYSTEM.

Linnaeus's *Philosophia Botonica* (1751), a pioneer taxonomic handbook, among much else provided a complete survey of the Linnaean system together with a commentary and synopsis of the classifications of earlier botanists. Linnaeus realized the artificial character of his 'Sexual System' and groped for a more natural system which could not, however, be satisfactorily built upon the knowledge available to him; nevertheless many of his 'ordines naturales' correspond to modern botanical families. Pages 27-36 deal with the 'Natural System' which he had first included in his *Classes Plantarum* (1738) as 'Fragmenta Methodi Naturalis'. His manuscript

annotations and additions show that this revised version was still undergoing extensive modification. (See J. L. Heller & W. T. Stearn, *Appendix*; 93–102, 1958).

28. LINNAEUS AND THE STUDY OF THE SWEDISH FLORA.
Despite his world-wide interests in botany and zoology Linnaeus had life-long keen interest in his native flora and made numerous botanical observations on his travels through Sweden. His interleaved copy of the second edition of *Flora Suecica* (1755) contains a mass of manuscript addenda, sufficient for a further edition, but none was published.
29. LINNAEUS'S PROJECTED MANTISSA III.
Right up to the end of his life Linnaeus industriously incorporated new information into his systematic works and kept paper slips with descriptions of new plants and animals. His amanuensis made a fair copy of the zoological descriptions which was corrected by the aged naturalist when ill health had rendered his handwriting almost illegible. It is apparent that he was at work on a projected *Mantissa* third edition right down to 1775, but despite the apparently advanced state of the manuscript it was never published, even by the younger Linnaeus after his father's death, although he incorporated some of his father's botanical information in his *Supplementum Plantarum* (1781).
30. LINNAEUS'S SCIENTIFIC CORRESPONDENCE.
Part of Linnaeus's success as a naturalist of world stature must be due to his energetic correspondence with friends, colleagues, students and academics at home and abroad. The German-born botanical artist Georg D. Ehret was a lifelong friend following their meeting in Holland in 1736 and the two corresponded for many years. In one of Linnaeus's letters to Ehret, dated 12th August 1747, when the latter was in England Linnaeus offered him the post of botanical draughtsman at the university of Uppsala. Ehret, now happily established in England, replied in March 1748 declining the post. Linnaeus's library includes ca. 3,000 letters written to him, of which over 2,000 are from abroad. (For an index to Linnaeus's correspondence see E. Ahrling, *Carl von Linné's Briefexling*, Stockholm, 1885 and reprint Zug, 1967; J. E. Smith, *Selection of the Correspondence of Linnaeus and other naturalists*, 2 vols. London, 1821).
31. LINNAEUS'S COAT OF ARMS.
Linnaeus was ennobled in 1761 and with characteristic enthusiasm and inventiveness designed a coat of arms for himself. The shield was divided into three fields, black, green, and red, signifying the three Kingdoms of Nature—with a superimposed egg, in section, 'to betoken Nature, which is continued and perpetuated in an egg', the shield surmounted with the helm bearing *Linnaea borealis*. The Swedish state Herald, Daniel Tilius, rejected the design and substituted a design adding three crowns for the Kingdoms of Nature. Linnaeus's motto 'famam extendere factis' (to spread one's fame by deeds) comes from Virgil's *Aeneid* book 10, line 68. The elements of Linnaeus's design are preserved in the Linnean Society's coat of arms, granted in 1802 (see illustration p.24).
32. LINNAEUS'S SYSTEM OF DISEASES.
Ever the systematist, Linnaeus also applied his methods to medical science as illustrated by his extensive *Systema Morborum*. Prepared as a detailed set of lecture notes for his course on the system of diseases, it follows the order and numbering of his *Genera Morborum* of 1763. The system by which diseases are arranged into

The Society's Grant of Arms, 1802 (see item 31).

classes, orders and genera based on their symptomatic characters alone owes much to the celebrated Montpellier physician Francois Boissier de Sauvages (1706-67). The two men corresponded for 30 years and Sauvages eventually published an elaborate *Nosologia methodica* in 1768 enumerating 2,400 diseases, whilst Linnaeus never published his own *Systema*. (See F. Berg, *Linnés Systema Morborum*, Uppsala, 1957. *Uppsala Universitets Årsskrift*, 1957: part 3).

Linnean Society Archives and other Manuscripts of Historic Interest.

33. SIR JAMES EDWARD SMITH'S PAPERS.

By purchasing Linnaeus's collections in 1784, young Dr. Smith became, at a stroke, a figure of world importance in natural history, and further established his place in history by founding the Linnean Society of London four years later in association with six others. He was, moreover, an able and highly industrious botanical author and soon built up an international circle of correspondents. Following his death in 1828, his numerous scientific manuscripts and extensive herbarium containing many holotype and isotype specimens were purchased by the Society, and many years later his letters, some 3,000 in all, were presented to the Society by his widow. They are regularly consulted on points of botanical or historical importance to this day and constitute a science history collection of great social as well as technical interest. (See W. R. Dawson, *The Smith Papers*, London, 1934. *Cat. of MSS. Linn. Soc. London No. 1: SMITH, Lady, Mémoire and correspondence of the late Sir J. E. Smith*, 2 vols.; London, 1832).

34. SMITH'S CATALOGUE OF LINNAEUS'S LIBRARY.

When James Edward Smith acquired the Linnaean library he compiled a manuscript shelf-catalogue with a press-mark allocated to each book. During the recent re-cataloguing of Linnaeus's library Smith's list was used as a provenance check and his press-marks have been recorded in the new catalogue.

35. THE SOCIETY FOR PROMOTING NATURAL HISTORY.

The immediate forerunner and, to some extent, the begetter of the Linnean Society was the Society for Promoting Natural History, founded in 1782 and disbanded in 1822. In February 1784, shortly after coming to London to complete his medical studies James Edward Smith became a member. Membership of this Society undoubtedly introduced to him to several of the natural historians who were to become leading Fellows in the Linnean Society, founded four years later. The Minute Books and other archives were made over to the Linnean Society in 1822 together with their Presidential ivory gavel which is used by the Linnean Society's President to this day.

36. THE FOUNDATION OF THE LINNEAN SOCIETY.

The first minute book of the Society records that on the 26th February 1788, at 12 Great Marlborough Street, London, the home of J. E. Smith, the foundation meeting of the Linnean Society took place with seven people attending. They were:

James Edward Smith, President (an M.D. and F.R.S. and owner of Linnaeus's library and collections)

Rev. Dr. Samuel Goodenough, Treasurer (Headmaster of a school at Ealing and later Bishop of Carlisle)

Thomas Marsham, Secretary (Employee of the Exchequer Loan Office)

Jonas Dryander (Curator of Sir Joseph Banks's library and collections)

James Dickson (Covent Garden nurseryman)

John Beckwith (an M.D.)

John T. Swainson (Secretary of the Board of Customs in London).

At a second meeting on the 28th March the Society was formally instituted and the first General Meeting took place on the 8th April at Smith's house.

37. THE FOUNDER'S PORTRAIT AND SOME OTHERS IN THE LIBRARY.
A fine portrait of Sir James Edward Smith by John Ringer, painted ca. 1793 (when it was exhibited at the Royal Academy) is hung at the end of the library over the fireplace. High above is a portrait of Sir Joseph Banks by Thomas Phillips, R.A. The Linnaean Collections were first offered to him for purchase. Acrel's letter came on 23 December 1783 when he and Smith were having breakfast together and, not requiring them himself, he strongly advised Smith to buy them. Sir Joseph was the Society's first Honorary Member and liberally assisted it in its earliest years, not least with gifts of rare books which are still preserved in the Library. On the first gallery ledges are four plaster busts of early Society Fellows. On the Piccadilly side are firstly James Murie, M.D., Sub-Editor and Assistant Secretary 1876-80 and Librarian 1880-8, secondly, Rt. Rev. Shute Barrington, Bishop of Durham, Honorary Member 1812-25. On the North side are firstly John J. Bennett, Secretary, 1840-80, secondly, Rt. Rev. Edward Stanley, Bishop of Norwich, President, 1837-49.
38. THE SOCIETY'S FIRST ROLL BOOK.
The Society's founder members recorded their signatures in a Roll Book. Amongst the earliest signatures is that of John Rotheram (c 1750-1804), the only English student to study under Linnaeus; he later became assistant professor of chemistry at Edinburgh, then professor of natural philosophy at St. Andrews (see illustration p.27).
39. FELLOWS' CERTIFICATES OF RECOMMENDATION FOR ELECTION.
Certificates of recommendation for Election as Fellows of the Society exist right back to the foundation in an almost complete set. The statement of the prospective member's interests is always somewhat formalised but these documents have great historic interest in that they record the signatures of those Fellows who supported his or her election.
40. THE SOCIETY'S FIRST SEAL.
"Sigillum Societatis Linneanae London." The Society's first seal had a characteristic 18th-century allegorical design of little special relevance which was replaced by one of heraldic conformity upon the granting of the Charter in 1802. It appears, from an oblique 18th-century reference, that this design may have been one rejected by the Royal Society as unsuitable for their Diploma of Foreign Membership.
41. THE ROLL AND CHARTER BOOK, 1802 ONWARDS.
On the 26th of March 1802 the Society was granted a Charter and the Society as theretofore existing was thereby dissolved and a new one immediately formed. The former records were closed and a new Roll Book was opened which is still in use today. It opens with the signatures of the fifteen Fellows listed in the Charter and as many of the Fellows of the old Society as could be gathered together to sign anew. The Roll of Fellows is interspersed with illuminated leaves bearing the signatures of the Society's Royal Patrons from George IV onwards, and of Royal Honorary Members.

We who have heretofore subscribed to having a Name, and for himself, that he will endeavour to promote the good of the Philosophical Society of London for the collection of Natural History, and to present the Birds for which the sum is established; that he will be present at the Meetings of the Society as often as conveniently may be especially at the Annual Meeting, and upon extraordinary Occasions; and that he will observe the Rules and Laws of the said Society. Provided that whenever any sum shall signify to the President under his Hand that he desire to withdraw from the Society, he shall be free from his obligation for the present.

42. THE ZOOLOGICAL CLUB ARCHIVES.

In 1820, a number of Fellows, led by N. A. Vigors (1787-1840) and the Rev. William Kirby (1759-1850), formed the Zoological Club to further the interests of zoology which they felt were neglected by the Society. The Club was only a partial success as it was kept on a tight rein by the mother Society and in November 1829, after getting into financial difficulties, it was disbanded. In the meantime the Zoological Society had been founded and chartered and, in most respects, filled the needs of zoologists; its Officers included some leading members of the Zoological Club. The Club archives, comprising minutes, correspondence, certificates of election and so forth, were deposited in the library of the Linnean Society.

43. JOHN ELLIS'S MANUSCRIPTS.

John Ellis (?1705-76), an outstanding British naturalist and King's Agent for West Florida, was a correspondent of Linnaeus for fifteen years. His greatest contribution was to the study of Zoophytes, whose animal nature he established and whose species he described with precision. Some of his manuscripts and correspondence were purchased with the Smithsonian collection in 1829. They include draft notes for his *Natural History of Zoophytes*, published by his friend Daniel Solander in 1786. His correspondents included Linnaeus, Peter Collinson, Alexander Garden, Stephen Hales, Thomas Pennant, and others and reflect his second great interest, the introduction of plants of economic importance to the North American colonies. (See S. Savage, *Calendar of the Ellis manuscripts*, London, 1948. *Cat. of MSS, Linn. Soc. London*, No. 4).

44. RICHARD PULTENEY'S PAPERS.

To Richard Pulteney (1730-1801), doctor, naturalist, and historian of science, must go much credit for introducing Linnaeus's works to English readers. In the 1750s he commenced a number of articles in the *Gentleman's Magazine* on Linnaeus's writings and in 1781 he published *A General View of the Writings of Linnaeus*. The work rapidly sold out in England and a French edition was published in 1789. As might be expected he was an early Fellow of the Linnean Society. The library possesses his extensive correspondence, various youthful writings, botanical manuscripts, and also that of his *General View*. His *Historical and Biographical Sketches of the Progress of Botany in England from its Origin to the Introduction of the Linnaean System* (2 vols. 1790) remains a mine of interesting information. A fine portrait by T. Beach hangs in the Meeting Room. (See R. H. Jeffers, 'Richard Pulteney, MD, FRS, and his correspondents', *Proc. Linn. Soc. London*, 171: 15-26; 1959-60).

45. EDMUND DAVALL'S JOURNAL.

Edmund Davall (1763-96) had an English father but a Swiss mother and in his 20s left England to live in Switzerland. He botanised with the younger Albrecht von Haller, came to England in 1783 and met James Edward Smith, and on his return home started a correspondence with Smith that lasted until his death ten years later. Apart from his letters to Smith the Society also possesses his copy of *The Naturalist's Journal*, drawn up by Daines Barrington in 1775, the book used by Gilbert White for his journal. Davall records seasonal events at Orbe in the Canton of Bern from August 1783 to July 1792. (See G. R. De Beer, 'Edmund Davall, FLS, an unwritten English chapter in the history of Swiss botany', *Proc. Linn. Soc. London*, 159: 42-65, 140; 1947: 160: 179-84; 1949 and 'Edmund Davall's note book', *Ibid.*, 161: 56-63; 1949).

✓ 46. FRANCIS BUCHANAN-HAMILTON'S PAPERS.

Between 1770 and 1860 medical men in the service of the Hon. East India Company made very important contributions to the natural history of the Indian subcontinent by their own collecting and investigation and their encouragement and training of Indian artists in the scientific portrayal of plants and animals. Francis Buchanan (later Hamilton) (1762–1829), an FLS, was a company surgeon who travelled in Burma, south-east Bengal, and Nepal between 1794 and 1803. He made valuable botanical collections, studied the fishes of the Ganges, and on retirement, completed elaborate commentaries on Rheede's *Horae Indicus Malabaricus* (1678–1703) and Rumph's *Herbarium Amboinense* (1741–55). The Society possesses his unpublished *Flora Nepalensis*, together with a portfolio of fine water colours; *Animalium et Plantarum Descriptiones*, comprising 314 diagnoses; and much of the manuscript of his extensive commentary on Rheede, instalments of which were read at 31 Society meetings—until long after the author's death. A set of his Nepal specimens formed the basis of David Don's *Prodromus Flora Nepalensis* (1825); there are many isotypes in the Smith Herbarium.

47. COLONEL GEORGE MONTAGU'S SCIENTIFIC WORK.

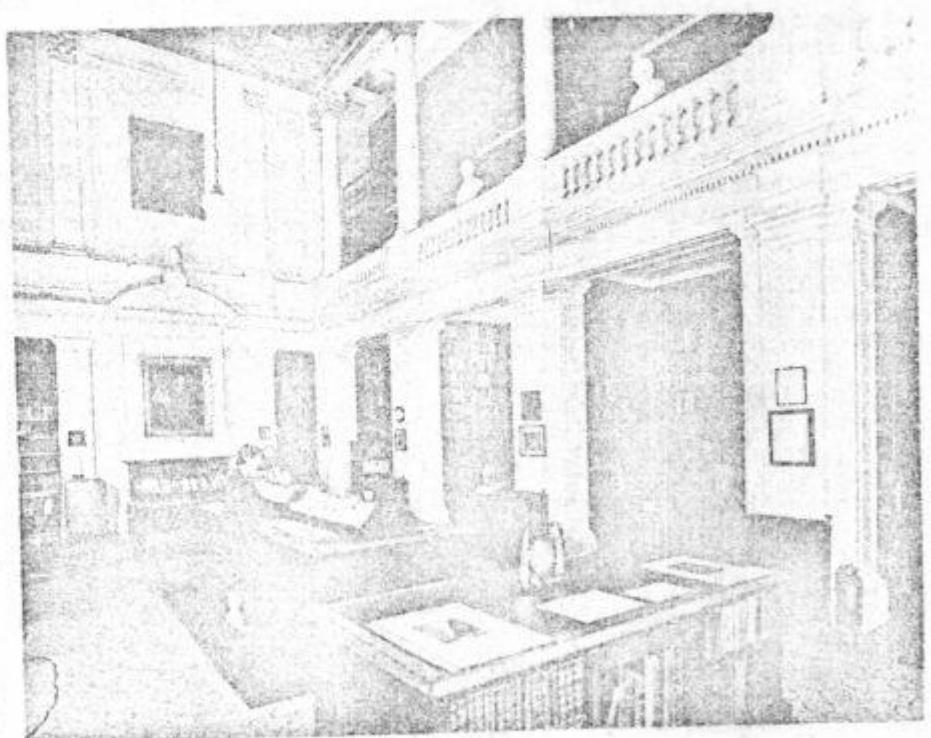

One of the Society's most industrious early Fellows was Col. George Montagu (1751–1815) commemorated in Montagu's Harrier. His *Ornithological Dictionary* published in 1802–13, was highly regarded for over half a century and was finally revised in 1866 by Edward Newman. The author's interleaved and extensively annotated copy of the 1802 Dictionary and the 1813 Supplement is in the Library together with an album of 76 water colours of British birds by Eliza Dorville, his common-law wife. His activities also extended to several invertebrate groups and extensive manuscripts, accompanied by albums of fine water colours by Eliza, reveals the painstaking and systematic nature of his observations. A handsome miniature portrait of Montagu was given to the Library in 1874.

48. WILLIAM SWAINSON'S CORRESPONDENCE.

A leading zoological artist of the early 19th century, William Swainson (1789–1855) was much esteemed by his contemporaries, but his work was somewhat eclipsed by that of Gould, Lear and others after his emigration to New Zealand in 1840. He was also a controversial writer and contributed ten natural history volumes to Lardner's *Cabinet Cyclopaedia* based on the subsequently discredited Quinary System of classification. His correspondence gives a fascinating insight into the zoological world of his day, both at home and abroad, and includes such luminaries as John Abbot, Jean J. Audubon, Prince Charles L. Bonaparte, Constantine Rafinesque-Schmaltz, and many others, comprising nearly 1,000 letters. (See A. C. L. G. Günther, 'An index of William Swainson's correspondence,' *Proc. Linn. Soc. London*, 1899–1900: 14–61).

49. THE PAPERS OF A. & W. S. M'LEAY.

Alexander M'Leay (1767–1848) was the first of a distinguished family that continues in Fellowship to this day. He served as Secretary from 1798 to 1825 and then left to become Colonial Secretary to the Government of New South Wales, a post which he held until 1837. His eldest son William S. M'Leay (1820–1891) was a co-founder of the Zoological Club in 1822, and in 1839 he too went to Australia and, like his father, died there. Both were keen entomologists and their circle of correspondents included most of the leading insect students of their day. W. S. M'Leay was a leading Quin-

The Library.

arian and his papers include much material relating to this curious movement in the history of biological classification. Their joint correspondence, together with a number of scientific manuscripts, is in the library and a fine oil painting of Alexander, by Thomas Lawrence, hangs in the Council Room, while a marble bust of William S. by C. Summers stands in the entrance hall.

50. LETTERS OF CHARLES DARWIN.

Charles Darwin (1809–82) undoubtedly outshines all other Fellows of the Society in popular fame. His joint paper with A. R. Wallace, which prepared the ground for his *Origin of Species* in 1859, was read at an extraordinary meeting of the Society in 1858 called to mourn the death of Robert Brown. In subsequent years it became apparent that it was their paper that really rendered the meeting extraordinary although the then President, Dr Thomas Bell, stated in his review of 1858 that 'the year has not, indeed, been marked by any of those striking discoveries which at once revolutionize, so to speak the department of science on which they bear'! An interesting Darwin memorial is the series of 41 letters and postcards he wrote to Thomas Henry Farrer (later Lord Farrer) from 1868 to 1881 on fertilisation in plants. The letters are interspersed with Farrer's notes and reminiscences of Darwin. Collier's well known portrait of Darwin hangs in the Society's Meeting Room with a plaque below commemorating the famous 1858 meeting.

51. A. R. WALLACE'S MALAYAN JOURNAL.

Wallace's journal for those years and his notebook in which he recorded personal observations and thoughts, extracts from Lyell's writings, entomological notes, &c. from 1855 to 1859 are some of the Society's greatest treasures. One of the Society's most illustrious Fellows was Alfred Russel Wallace (1823–1913) whose name is necessarily linked with that of Charles Darwin as an evolutionist. Wallace spent the years 1854 to 1862 as a natural history collector in Malaysia, his travels extending to some 14,000 miles, from Malaya to New Guinea, and it was in 1858 from the little island Ternate in the Moluccas, Indonesia, that he wrote to Darwin the famous letter outlining the theory of evolution by natural selection which, unbeknown to him, Darwin had conceived some twenty years earlier. This led to their momentous paper of 1858 published in the Society's Journal of Zoology, Vol. 3.

52. THOMAS LAWSON'S NOTEBOOK.

Thomas Lawson (1630–91) was an Anglican clergyman who became a Quaker after a visit from George Fox in 1652 and, after resigning his living, made journeys round the country to visit meetings of his spiritual brethren; on the way he kept notes of plants observed with their localities. Lawson corresponded with John Ray and made his records available for the great botanist to enrich his *Synopsis Methodica Stirpium Britannicarum*, first published in 1690. This notebook, presented to the Society in 1947, records his travels made in 1677 and earlier, especially in Lancashire, Westmorland, Yorkshire, Cambridge and the Home Counties. (See C. E. Raven, 'Thomas Lawson's notebook', *Proc. Linn. Soc. London*, 160: 3–12; 1948).

53. RUDBECK'S CAMPI ELYSII ILLUSTRATIONS.

A remarkable survival in the Linnaean collection is a series of early botanical woodcut blocks. Olof (Olaus) Rudbeck (1630–1702), with his son of the same name Olof (Olaus) Rudbeck the Younger (1660–1740), was working on an enormous compilation, the *Campus Elysius Liber*, intended to provide in twelve volumes a survey of all the plants then known and illustrated with thousands of woodcuts,

when the disastrous fire, which destroyed most of Uppsala in May 1702, also destroyed most of the wood blocks and the printed stock of the book. Only two copies of volume 1 (1702) and a few of volume 2 (1701) survived the fire, together with a few original wood blocks: James Edward Smith acquired these wood blocks with the Linnaean library, he published prints from them as *Reliquiae Rudbeckiana* in 1789. The elder Rudbeck died soon after this calamity and the dispirited younger Rudbeck, much of whose Lapland collection had perished in the fire, and who later befriended Linnaeus, thereafter gave less attention to botany and more to philology. (See R. Guiney, 'On the whereabouts of the "Oxford copy" of Rudbeck's "Campi Elysi"', *Proc. Linn. Soc. London*, 161: 50-6; 1949).

SOME SOURCES OF FURTHER INFORMATION

The literature relating to the life, achievements and influence of Linnaeus includes several thousand items and is continually augmented. The following list serves merely as an introduction to these sources of further information; its items are mostly well documented.

- Blunt, W. 1971. *The Compleat Naturalist. A Life of Linnaeus. With the Assistance of W. T. Stearn*. London. [Swedish translation, 1977. *Carl von Linné. Fackgranskning och Förord Gunnar Broberg*. Stockholm].
- Fries, Th. M. 1903. *Linné. Lefnadssteckning*. 2 vols. Stockholm. [An index, *Personregister* by Hans Krook was published at Uppsala in 1956].
- Goerke, H. 1966. *Carl von Linné. Arzt, Naturforscher, Systematiker*. [English translation, 1973. *Linnaeus*. New York].

LINNEAN SOCIETY OF LONDON

Manuscript collection. No full catalogue exists for the whole. There is a handlist to the general collection which includes names of correspondents in the important letter collections as well as other manuscripts, excluding the Linnaean. There is a separate, and more detailed, catalogue of the Linnaean manuscripts, based on the notes of J.M. Hulth and A. Uggla, which is being completed in Sweden by C.O. von Sydow. There is no catalogue of the Society's own archives, though a handlist is in course of preparation. It is hoped to prepare a summary catalogue of the whole manuscript and archives collection before too long and work is in progress on this at present.

Some of the principal sources of information already in print are :-

The manuscript collection falls into the following broad categories:

Archives. The Society has kept a reasonably full record of its activities since 1788 and these comprise bound sets of Council and General Meeting minute books, various committee minute books, attendance registers &c.; Roll & Charter Books, Certificates of Recommendation, registers of Fellows; Registers of papers read, incomplete publication records, incomplete referees' reports; Ledgers, Cash Books, misc. financial records; Misc. records associated with the Linnaean and other specimen collections, registers of consultation, Opinions on Linnaean specimens, sale records of disposal of non Linnaean collections; Library Committee minute books, records of donations 1788-99, 1822- (with breaks), record of Linnaean books returned to Sweden, bequests; Domestic archives files on Homes of the Society, portraits and busts, staff and Officers, Funds, &c. &c.

Other archives. Linnaean Club, Zoological Club, Society for Promoting Natural History, Botanical Society of London (minute book 1844-51). H.M. Treasury Committee on Botanical Work 1900-01.

✓ Linnaean Manuscripts. A large collection of working papers, drafts for publication, lecture notes, correspondence, misc. manuscripts of other naturalists, &c. covering almost all aspects of the medical, botanical, zoological, museological, and bibliographical interests of Linnaeus, Father and Son.

General Manuscript collection. Bound and unbound manuscripts acquired from various sources. Incl.: -
Alex. ANDERSON, MSS & drawings on St. Vincent plants;

Patrick BROWNE, Plants lists for Jamaica & Ireland; Francis BUCHANAN, MSS and drawings on Indian plants & animals; Jonathen COUCH, MS on British fishes; Frederick CURREY, Notes & drawings on fungi; Edmund DAVALL, Journal, annotated floras &c.; John ELLIS, Manuscripts; S.S. FLOWER, Biographical dict. of zoologists; Michael FOSTER, Notebooks on Irises; Albert GUNTHER, MSS on Reptiles and fishes; J.R. G. GWATKIN, Drawings of flowers; B.D. JACKSON, MSS & papers; Thomas LAWSON, Botanical notebook; George LEWIS, MSS on Histeridae (Coleopt.); Alex. & W.S. M'LEAY, Misc. manuscripts and correspondence; William MARKWICK, Botanical and zoological MSS; George MONTAGU, Ornithological and conchological MSS; Richard PULTENEY, Manuscripts of published works, misc. MSS; Spencer SAVAGE, Papers; John C. SAWER, Materials for 'Odorographia'; James E. SMITH, Papers and corr.; Richard SPRUCE, Notebook; John STACKHOUSE, Miscellaneous Cryptogamic drawings; L.B.C. TROTTER & J. ELSE, Drawings of British mosses; A.R. WALLACE, Journals and notebooks, many annotated books; Nathaniel WALLICH, Burmese flora; Jacob WILKINSON, Fossil drawings; Nathaniel WINCH, Some annotated books; William WITHERING, Plantae Ulyssiponenses; B.B. WOODWARD, Conchological MSS; T.J. WOODWARD, Botanical notes; &c. &c.

Correspondence collections. Geo BENTHAM, Small collection of letters to family; Peter COLLINSON, 'Commonplace Books' with correspondence incl.; George DON, Botanical correspondence; John ELLIS, Correspondence in 2 vols; E.M. HOLMES, 3 boxes of letters; B.D. JACKSON, Index Kewensis correspondence, 3 vols; Carl LINNAEUS, scientific correspondence, 17 vols; Alex. & W.S. M'LEAY, 3 boxes of letters; George NEWPORT, small collection of letters; Henry PRESTOE, Small collection of letters; Richard & Elizabeth PULTENEY, 5 boxes of letters; G.J. ROMANES, Corr. with J.T. Gulick & others (copy); Albrecht W. ROTH, vol. of letters from F.v.Wulfen & J.C.D.v. Schreber; James E. SMITH, 26 vols of scientific and general correspondence; Pleasance Lady SMITH, 4 boxes of letters; William SWAINSON, 5 vols of correspondence; Henry TRIMEN, Small collection of letters; Nathaniel J. WINCH, 8 vols of scientific correspondence; B.B. WOODWARD, Conchological correspondence, 2 boxes & 1 vol.; &c.

Also artificial collections : Isabella JAMES, Collection of autographs of British & foreign botanists, 2 vols; Nathaniel B. WARD, Misc. collection of 67 people's letters incl. some early botanists; William WHITWELL, Misc. collection of autographs of botanists, chiefly British, 2 vols.

Loose letters. Some 22 boxes of misc. loose letters incl. Linnean Society selected correspondence and misc. others; 7 vols. & 6 boxes of Linnean Society correspondence from 1880-1926. Miscellaneous other letters kept with the Domestic Archives files to which they refer.

Miscellaneous manuscripts. Some hundreds of loose MS papers, chiefly the texts of papers read to the Society from its foundation, and incl. many unpublished papers.

Other material includes personal relics of Linnaeus, Smith, &c. Diplomas of J.E. Smith, George Bentham, George Newport; Medals of J.D. Hooker, and misc. other medals.

Portraits. Collection of engraved portraits of some 850 individual naturalists (Lord Arthur Russell coll'n and augmented), photo portraits of Fellows, Literary & Scientific Portrait Club photo album.

PREFACE.

THE manuscripts catalogued in this volume comprise the correspondence and miscellaneous papers of Sir James Edward Smith, M.D., F.R.S., one of the founders and the first President of the Linnean Society. In 1857, Lady Smith presented to the Society, bound into nineteen volumes, what purported to be the entire scientific correspondence of her husband. Some years later, however, Lady Smith discovered a considerable number of letters which had been omitted from the original series, and these, unsorted and tied in bundles, she presented to the Society in 1872. These additional letters have recently been arranged, mounted and bound into seven extra volumes. In 1927, the Rev. A. J. Fellowes presented to the Society Sir J. E. Smith's diplomas together with a number of his miscellaneous papers and a large batch of the correspondence of Lady Smith. The last-named papers, consisting largely of letters from relatives and friends and subsequent in date to the death of Sir J. E. Smith, have not been included in the present catalogue. Whilst they are biographically interesting and important for their associations, many of these letters cannot be said to be scientific in character, and it has therefore been deemed inappropriate to include them, but a manuscript list is kept in the Society's Office for reference. The remainder of the papers came into the Society's possession with the scientific library and collections of Sir J. E. Smith in 1829.

The correspondence of Sir J. E. Smith, forming Section I of this Catalogue, and comprising over 3000 letters, is contained in the nineteen original and the seven additional volumes referred to above. In the present catalogue, both series have been combined, and indexed alphabetically under the writers' names in chronological order, with references to the number of volume and folio at which they are to be found.* The dates of undated, or incompletely dated, letters have been restored within square brackets, whenever this could be done with certainty, from endorsements or internal evidence. A brief summary of the principal subject-matter is given in each case, but it must be clearly understood that the present publication is a *Catalogue* and not a *Calendar*: that is to say, it is a register of the papers with an indication of their more important and interesting contents, and not a complete subject-index of all the matters discussed or mentioned in the documents. The absence, therefore, of any given topic from the summaries in this catalogue does not necessarily mean that such topic is not alluded to in the letters. Many of the letters deal with a multiplicity of subjects; others discuss or name a great many

* The documents should be quoted by volume and folio, thus: *Linn. Soc., Smith MSS. 21, 150.*

species of plants ; others again are friendly or chatty letters and range over all kinds of topics (the contents of such letters are generally entered in this catalogue as " News "). It would have been impossible to enter all these particulars without making the catalogue very bulky and cumbersome to use. Many even of the most trivial of the letters have a high value in a biographical and historical point of view, because in the " news " they often furnish information as to dates and as to the movements and activities of their writers and others and of various contemporary events.

Letters written in foreign languages are marked with the abbreviations *Fr.*, *Germ.*, *Ital.*, and *Lat.*, respectively. All letters not so marked, even those of foreign correspondents, are written in English. The botanical terminology of the originals is retained, even when now obsolete.

Some of the letters have been published, wholly or in part, in Lady Smith's *Memoir and Correspondence of the late Sir James Edward Smith* (2 vols., London, 1832), but the printed versions, when collated with the originals, reveal many inaccuracies. The dates are often incorrect, verbal changes are made, passages are frequently suppressed without any indication of such omission, in some cases two or more letters have been combined, and throughout the spelling, punctuation and grammar have been " touched up." All the letters so published are noted in this catalogue with the reference *Mem.*, and the number of the volume and page. All allusions to papers published in the *Transactions* of the Linnean Society are also noted with the abbreviation *Trans.*, and reference to volume and page.

The nineteen volumes of letters arranged by Lady Smith purport to be alphabetical and chronological in order, but they abound in errors of arrangement, many of the documents being misplaced. These errors, however, are now of no consequence as the position of every letter can be ascertained from the present Catalogue. The combined series of letters, original and additional, do not even now represent the whole of Sir J. E. Smith's correspondence. The originals of some of the letters published in the *Memoir* are missing (*e.g.*, those of Acrel relating to the purchase of the Linnæan Collections), and reference is sometimes made in the letters themselves to others that are not now extant. In many cases drafts or copies of Sir J. E. Smith's replies have been preserved, and in some instances also his original letters were returned to Lady Smith after his death and incorporated in the series. All such letters have been distributed in this Catalogue and are entered under the names of the persons addressed. To have assembled them all under Sir J. E. Smith's name would have resulted in removing them from their appropriate places. Under the name of a given correspondent, therefore, will be found not only that writer's own letters, but also Sir J. E. Smith's replies whenever they exist. Some of Sir J. E. Smith's letters to correspondents represented in the present series are preserved in the Manuscripts Department of the British Museum, in the Herbarium at Kew, and elsewhere, and references to such letters will be found in their appropriate places. The

letters of Sir J. E. Smith to members of his family, however, have been kept apart from the main series and will be found amongst the Smith Family Letters in Section II.

A certain number of printed documents was found amongst the papers of Sir J. E. Smith. For the purposes of this Catalogue, these have been treated as manuscripts.

The Smith Papers of the Linnean Society, taken as a whole, form a large and valuable body of material for the history of science and scientific biography for the period they cover (*c.* 1780–1828), and especially for the history of Botany and of the early years of the Linnean Society. There are very many individual letters that are of first-rate importance in this respect besides many which are extremely valuable as autographs.

The general arrangement of the present Catalogue will be seen from the Table of Contents, and speaks for itself. Although it is the product of odd leisure hours in an active life engaged in a variety of other work, great care has been taken in the compilation of this Catalogue, and every means within the author's power have been employed to make it simple, serviceable and complete.

It is the author's pleasant duty, in conclusion, to offer his thanks to the President and Council of the Linnean Society for having entrusted the work to him, and to the Officers and staff of the Society for their constant courtesy in affording him, in the pleasantest manner, every facility for the accomplishment of a self-imposed but highly instructive and interesting labour of love.

SECTION I.

GENERAL CORRESPONDENCE.

ABBOT, Rev. Charles (1761-1817).

1. Bedford.	1795	Mar. 22.	Encloses botanical paper for Linn. Soc.	1.1
2. "	1799	Feb. 3.	Promises specimens of <i>Chara tomentosa</i> and other plants ; adds 11 species to <i>Flora Bedfordiensis</i> .	1.3
3. "	1800	Dec. 31.	Dawson Turner and species of <i>Phascum</i> .	20.1
4. "	1801	Mar. 7.	<i>Phascum</i> ; method of transplanting ; Lichens.	20.4
5. "	[1801]	Mar. 20.	<i>Hypnum Smithii</i> ; <i>Phascum</i> ; <i>Salix Russelliana</i> .	20.7
6. "	1801	Apl. 7.	Species of <i>Salix</i> ; <i>Lichen psora</i> ; <i>Bryum flavesrens</i> .	20.8
7. "	1801	May 15.	A new <i>Primula</i> .	20.10
8. "	[1801]	Aug. 27.	Sends specimen of <i>Scirpus</i> .	20.12
9. "	1802	Jan. 29.	Plants found on a journey to Oxfordshire.	20.13
10. "	1802	Feb. 15.	Death of Lady Russell ; Sowerby's negligence with specimens sent to him. [Mem., ii, 84.]	1.5
11. "	1802	May 3.	<i>Salix Russelliana</i> at Woburn ; thanks for drawings of <i>Mentha odorata</i> , etc.	1.7
12. "	1802	May 11.	<i>S. Russelliana</i> and other Willows.	1.9
13. "	1802	Sep. 3.	A strange <i>Conferva</i> ; list of plants found since 1798.	20.15
14. "	1802	Nov. 5.	Sends specimens of mosses ; D. Turner on mosses.	20.17
15. "	1803	Nov. 8.	Various species of <i>Bryum</i> ; <i>Allium carinatum</i> .	1.10
16. "	1804	Nov. 2.	<i>S. Russelliana</i> ; <i>Thlaspi campestre</i> and other plants.	1.12
17. "	1815	Oct. 8.	Condolence on bereavement [Death of S.'s brother].	1.14

ACHARIUS, Erik (1757-1819).

1. Vadsteni.	1799	Jly. 18.	Works on Lichens. <i>Lat.</i>	1.15
2. "	1801	Oct. 6.	On Lichens with long list of species. <i>Lat.</i>	1.17
3. "	1802	Sep. 24.	Sends specimens of Lichens. <i>Lat.</i>	20.19
4. "	1802	Dec. 8.	On Lichens. <i>Lat.</i>	1.19
5. "	1803	Apl. 28.	Exchange of books. <i>Lat.</i>	1.21
6. "	1805	Oct. 15.	On Lichens. <i>Lat.</i>	1.13
7. "	1807	Dec. 8.	Sends specimens of Lichens. <i>Lat.</i>	1.26
8. "	1813	Oct. 26.	As for books promised in exchange.	1.27

ACREL, Johan Gustaf (1741-1801).

1. Upsala.	1787	Feb. 4.	Publications in Upsala ; Linnean collections. <i>Lat.</i>	1.29
2. "	1787	Dec. 21.	Visit of Dr. Signeur to England. <i>Lat.</i>	1.31
3. "	1789	Nov. 6.	News ; mentions Banks, Salisbury, Dryander, etc. <i>Lat.</i>	1.33
4. "	1791	Mar. 30.	Proposed visit to England. <i>Lat.</i>	1.35
5. "	1792	Sep. 24.	Nicolous Torner visits Banks ; sends books. <i>Lat.</i>	1.37
6. "	1793	Mar. 31.	Invites S. to visit Sweden. <i>Lat.</i>	1.38
7. "	1797	May 24.	Sends dissertation ; Life of Linnaeus. <i>Lat.</i>	1.40

AFZELIUS, Adam (1750-1837).

1. Glasgow.	1791	Aug. 18.	Collecting whilst travelling.	1.42
2. Free Town.*	1792	Jly. 2.	Arrival and description of the colony. [Mem., ii, 54.]	1.43
3. " "	1792	Sep. 1.	Sending specimens ; has had fever.	1.45
4. " "	1792	Sep. 26.	Suffers from climate ; criticizes Gmelin.	1.47

* Sierra Leone.

AFZELIUS, Adam.—Continued.

5. Free Town.*	1792	Dec. 30.	Acknowledges books ; collecting plants, insects, etc.	1.48
6. " "	1793	Feb. 16.	Sends bot. and zool. specimens to S. and Banks.	1.49
7. Torbay.	1794	Feb. 13.	Return voyage ; claims priority of publication.	1.50
8. Free Town.	1794	May 8.	Voyage back to Sierra Leone ; commences collecting.	1.51
9. " "	1794	Nov. 19.	Invasion by the French ; his property destroyed. [Mem., ii, 61.]	1.52
10. " "	1795	Jne. 3.	Thanks S., Banks and others for making good his losses.	1.54
11. London.	1797	Dec. 30.	Generic description of <i>Afzelia</i> .	20.20
12. Upsala.	1803	Mar. 29.	Sends specimens of <i>Salix</i> ; is married and has a son.	1.55
13. "	1823	Jan. 14.	Has written Life of Linnaeus ; requests S. to find a publisher for an English edition.	1.57

AITON, William Townsend (1766–1849).

1. Kew.	1824	Nov. 28.	The red-twisted lime.	20.24
---------	------	----------	-----------------------	-------

ALLIONI, Carlo (1725–1804).

1. [Turin.	1787]	—	Sends plants ; requests S. to execute business commissions in London. <i>Fr.</i>	1.58
2. " "	1787	Dec. 1.	Business matters ; sale of his works in London. <i>Fr.</i>	1.60
3. " "	1788	Jan. 23.	The same. <i>Fr.</i>	1.62
4. " "	1789	Sep. 18.	The same. <i>Fr.</i>	1.64
5. " "	1790	Nov. 13.	The same ; his two new medical works. <i>Fr.</i>	1.67
6. " "	1790	Nov. 24.	S. elected Foreign Member of Turin Academy. <i>Fr.</i>	1.65
7. " "	1791	Sep. 24.	Thanks for plants sent by S.	1.68

ANDERSON, Dr. James (d. 1809).

1. Cotfield.†	1794	May 21.	Sends specimens and notes from Pallas ; a felt made from vegetable down.	1.69
2. London.	1797	Feb. 8.	On educating and training the young.	1.71
3. " "	1807	Oct. 24.	On <i>Dianthus</i> .	1.73

ANGUISH, Mrs. S.

1. Norwich.	1796	May 14.	Asks medical advice for her eye complaint.	20.25

[Mem., ii, 118.]	22 . 140

* Gwyn's letters are exceedingly difficult to analyse. They deal with a multiplicity of topics, running from one subject to another without division. Almost every word is contracted and some of the abbreviations difficult to understand. Nothing short of a full transcription can give an idea of the contents of these letters.

HARDWICKE.—*Continued.*

8. Calcutta	1809	Apl. 25.	His military duties allow no opportunities for Nat. Hist.; thanks for <i>Physiology</i> ; Roxburgh's activities; movements of Buchanan; messages to friends; a memo. from Dr. Wm. Hunter. [q.v.]	22 . 144

PENNINCK, Mrs. Schimmel. See SCHIMMELPENNINCK.**PERSOON, Christiaan Hendrik (1761-1836).***

1. Göttingen.	1794	Sep. 16.	Sends work on Fungi and offers specimens ; synonymy of Fungi. <i>Lat.</i>	8.84
2. ,	1795	Dec. 22.	Sends drawings for a memoir of which text is to follow ; Hedwig's <i>Theoria Generationis.</i>	8.62

* An interesting account of Persoon and of the letters that follow has been published by J. Ramsbottom in *Proc. Linn. Soc.* ; Session 1933-4, part i, pp. 10-21.

PERSOON, C. H.—Continued.

3. Göttingen.	1796 Jne. 20.	Enquires about his paper on Fungi for which the drawings were sent ; sends list of desiderata and asks S. for his. <i>Lat.</i>	8.65
4. ".	1798 Mar. 28.	Awaits diploma of Linn. Soc. ; sends description of new Fungi ; asks for <i>Lycoperdon phalloides</i> ; his knowledge of English. [On the back, S. has written a summary of his reply.]	8.66
5. "	1798 Dec. 20.	Sends description of a new variety of Beet. [<i>Trans.</i> , v, 232] ; his For. membership of Linn. Soc.	8.70
6. "	1799 Jne. 27.	Has sent copies of his works to Sowerby ; is dedicating to S. the second part of his <i>Mycological Observations</i> ; has reprinted Thunberg's Dissertations.	8.67
7. "	1800 Jne. 19.	Sends presentation copy of his <i>Myc. Obs.</i> ; thanks for species of <i>Persoonia</i> .	8.69
8. "	1801 Jan. 15.	Thanks for <i>Flora Brit.</i> ; requests <i>Flora Lapponica</i> , unobtainable in Germany ; requests S. to burn his memoir on Fungi as it is superseded by his <i>Synopsis</i> ; request for plants for a "cryptogamical manual" ; <i>Bungea</i> and <i>Batarea</i> .	8.72
9. Paris.	1802 Apl. 7.	Has sent his <i>Synopsis</i> ; list of 44 species of Mosses, Lichens, etc., to be determined by Linnaean system ; wishes to make exchanges with Goodenough. <i>Fr.</i>	8.74
10. "	1802 Nov. 3.	Thanks S. and Pitchford for specimens ; promises a paper on new species of Mosses, Lichens and Ferns ; specimens for determination. [List added by S.]	8.76
11. "	1810 Nov. 12.	Cut off by the war ; working on a new book on Fungi ; has never received Diploma from Linn. Soc. and thinks he was not elected.* <i>Fr.</i>	8.78
12. "	1818 Jne. 18.	Financial embarrassments ; asks S.'s help to obtain British employment ; encloses a specimen.† <i>Fr.</i>	8.80
13. "	1818 Jly. 18.	His affairs ; thanks S. for advice, and begs him to approach Banks. <i>Fr.</i>	8.82

PEYROUSE. See LA PEYROUSE.

PIGNATELLI, Prince Francesco.

1. Brighton.	1804 Jly. 28.	Compliments ; books wanted by Ventenat. <i>Fr.</i>	8.91
--------------	---------------	--	-------------

PITCHFORD, John‡ (1737–1803).

X 1. Norwich.	1781 Nov. 12.	News from Norwich to S. in Edinburgh.	8.94
2. "	1782 Apl. —.	Does not consider Botany necessary to medical education ; plants found in Norfolk ; Fungi. [<i>Mem.</i> , i, 41.]	8.96
3. "	1782 Oct. —.	News ; use of Bark in fevers ; <i>Lichen tartareus</i> and <i>L. parellus</i> ; discussion of various plants.	24.88
4. "	1782 Oct. 12.	News ; list of desiderata ; has obtained most of S.'s desiderata ; list of specimens from Woodward.	24.90
5. "	1782 Nov. 30.	Various species of <i>Lichen</i> ; Alexander of Halifax.	24.92
6. "	1782 Dec. 21.	Decoctions of bark ; Lichens.	8.98
7. "	1783 Oct. 21.	Various plants ; <i>Littorella</i> ; <i>Jungermannia</i> ; Fungi.	24.94
8. "	1784 May 2.	Congratulations on acquiring the Linnean collections. [<i>Mem.</i> , ii, 107.]	24.96
9. "	1784 Nov. 24.	Safe arrival of Linn. collections.	24.98
10. "	1784 Nov. 26.	Thoughts and advice respecting the Linn. Collections ; urges S. to publish a <i>Flora Britannica</i> "in Linnaean dress." [<i>Mem.</i> , ii, 128.]	24.100

* Persoon was elected F.M.L.S., 16 June, 1799.

† This letter and the next are printed in full by Ramsbottom, *op. cit.*, pp. 17–21.

‡ The letters of Pitchford are for the most part too long to analyse satisfactorily. As an old friend of the family, he wrote in a chatty style and sent all the local news and gossip to Smith. The botanical portions are full of interest, but so great a number of species is discussed, that it is impossible to mention more than a few of the more important.

PITCHFORD, John.—Continued.

F.—Letters from [Sir] James Edward Smith to various relatives.

1. Leyden.	1786	Jly. 15.	[To Mrs. Howarth.]	19. 89
2. Paris.	1786	Sep. 24.	[To Mrs. Howarth.]	19. 101
3. Genoa.	1787	Jly. 7.	[To Mrs. Howarth.]	19. 145
4. Paris.	1786	Oct. —.	[To "Mrs. P." Copy.]	19. 105

* Endorsed by Lady S. "I think this is my dear James's last letter."

SECTION III.

DIPLOMAS OF SIR JAMES EDWARD SMITH.*

1. Leiden University, Doctor of Medicine. 15 July, 1786. Vellum. Hand-written. Wax seal in metal case, appended.	27.1
2. Société Royal d'Agriculture de Paris. Corresponding Member. 11 Jan., 1787. Vellum. Printed. Wax seal, affixed.	27.2
3. Regia Scientiarum Taurensis Academia. Turin, 4 June, 1789. Corresponding Member. Paper. Printed. Wafer seal, affixed.	27.3
4. Académie Delphinale. Grenoble, 15 Mar., 1790. Paper. Printed. Wax seal, affixed.	27.4
5. Société d'Histoire Naturelle de Paris. 24 Sept., 1790. Associate. Paper. Printed. Wax seal, affixed.	27.5
6. Regia Scientiarum Taurensis Academia. Turin, 5 Dec., 1790. Honorary Member. Paper. Printed. Wafer seal, affixed.	27.6
7. Academia Regia Scientiarum Stockholmensis. 2 May, 1792. Member. Vellum. Hand-written. Wafer seal, affixed.	27.7
8. Literary and Philosophical Society of Newcastle-upon-Tyne. 11 Mar., 1794. Honorary Member. Paper. Printed. No seal.	27.8
9. Societas Physiographica Lundensis. Lund, 26 July, 1794. Honorary Member. Paper. Printed. Wafer seal, affixed.	27.9
10. American Philosophical Society of Philadelphia. 15 Jan., 1796. Honorary Member. Paper. Printed. Wafer seal, appended.	27.10
11. Imperialia Academia Naturae Curiosorum. Erlange, 10 Oct., 1797. Honorary Member. Paper. Printed. Wafer seal, affixed.	27.11
12. Gesellschaft Naturforschender Freunde. Berlin, 9 July, 1798. Member. Paper. Printed. Wax seal, affixed.	27.12
13. Manchester Literary and Philosophical Society. Dec. 27, 1799. Honorary Member. [Signed by John Dalton.] Vellum. Printed. Wafer seal, appended.	27.13
14. Societas Physica Gottingensis. 20 Mar., 1800. Honorary Member. Paper. Printed. Wafer seal, appended.	27.14
15. Societas Phytographicia Gottingensis. 14 Feb., 1802. Paper. Printed. Wafer seal, affixed.	27.15
16. Société des Naturalistes de Moscou. 31 Jan., 1806. Honorary Member. Paper. Printed. Wax seal, affixed.	27.16
17. Literary and Philosophical Society of Preston. 20 April, 1810. Honorary Member. Parchment, engraved. Wax seal appended. In metal cylinder.†	27.17
18. Societas Phytographicia Gorkenkensis. 26 Mar., 1811. Member. Paper. Printed. Wafer seal, affixed. Printed Rules enclosed.	27.17
19. New York Literary and Philosophical Society. 15 July, 1815. Honorary Member. Paper. Letter, hand-written, no seal.	27.18

* This collection of Diplomas (except No. 17) was presented in 1927 by the Rev. A. J. Fellowes. It is not complete, the Diploma of the Royal Society, for instance, being missing.

† This diploma was not in the Fellowes collection, but was received by the Society in 1829.

SECTION III.—Continued.

20. Societas Caesarea Naturae Curiosorum Mosquensis. 20 Aug., 1815. Honorary Member. Paper. Printed. Wafer-seal, affixed.	27 . 19
21. Gesellschaft zur Beförderung der gesammten Naturwissenschaften in Marburg. 13 Sept., 1817. Paper. Printed. Wafer-seal, affixed. Statutes of the Society enclosed, and covering letter.	27 . 20
22. Institut de France : Academie pour les Sciences naturelles. 23 Nov., 1818. Corresponding Member. Paper. Printed. Embossed seal. [Two documents, both signed by Cuvier.]	27 . 21
23. Oeconomische Gesellschaft zu Potsdam. [Royal Prussian Economic Society.] 24 May, 1821. Paper. Printed. Wax seal, affixed. With covering letter.	27 . 22
24. Société Linnéenne de Paris. 15 Oct., 1821. Honorary Member. Paper. Hand-written on headed paper. No seal. Rules of the Society enclosed.	27 . 23
25. Naturforschende Gesellschaft zu Leipzig. 19 Aug., 1822. Honorary Member. Paper. Printed. Embossed seal.	27 . 24
26. Société Linnéenne de Lyon. 6 Sept., 1824. Corresponding Member. Paper. Printed. Wax seal, affixed.	27 . 25
27. Warrington Institution. Undated. Honorary Member. Hand-written letter. No seal. Book of Rules, etc., enclosed.	27 . 26

SECTION IV.

MANUSCRIPTS AND MATERIALS OF SIR J. E. SMITH'S
PUBLISHED WORKS.

1. Manuscript of the *Flora Graeca* (incomplete). By S. throughout, written on both sides of sheets, with indices and proof of printed title-page. 415 folios. 28.1
2. Manuscript of the *Introduction to Physiological and Systematic Botany* (1807). By S. throughout. Text, 163 fo.; title and dedication, 2 fo.; indices, 7 fo.; List of S.'s works, 1 fo.;—total, 173 fo. 29.1
3. Manuscript of the *Lachesis Lapponica* (1811). 247 fo. in autogr. of Charles Troilius, the translator; [see §I, s.v. TROILIUS]; 2 fo. in unknown hand; 90 fo. by S. Total, 359 fo. 30.1
4. Manuscript of the *Selections from the Correspondence of Linnæus* (1821). Mostly by S., a few fo. by other hands. 286 fo. Incomplete 31.1
5. Fragments of articles and lists of articles for Rees's *Cyclopaedia*. All by S. 33 fo. 32.1
6. Draft of the Cambridge Pamphlet [see 34.1]. All by S. 26 fo. 32.34
7. Letter to the Editor of the *Monthly Magazine*, dated Norwich, 8 Nov., 1804. [Draft reply by S. to strictures on his *Flora Brit.*] 6 fo. 32.62
8. Draft of another letter, dated 12 Feb., 1805. 4 fo. 32.68
9. Draft of another letter, dated 17 Feb., 1808 [on his rupture with R. A. Salisbury]. 2 fo. 32.72
10. Fragments of four other similar letters. 4 fo. 32.74
11. Draft of "An Illustration of a grass called by Linnæus *Cornucopie alopecuroides*." [Trans., vii, 245 (1804).] Two copies, incomplete. 2 fo. 32.78
12. Draft of "Characters of a new Liliaceous genus called *Brodaea*." [Trans., x, 1 (1810).] 3 fo. 32.80
13. Draft of "An enquiry into the genus of tree called by Pona *Abelia cretica*." [Trans., ix, 126 (1808).] Incomplete. 2 fo. 32.83
14. Fragments of a paper entitled "The Decandrous Papilionaceous plants of New Holland." [Trans., ix, 245 (1808).] 1 fo. 32.85
15. Draft of "Account of a new genus of New Holland plants named *Brunonia*." [Trans., x, 365 (1810).] 3 fo. 32.86
16. Fragments of MSS., drafts and materials for the *English Botany* and *Flora Britannica*. 156 fo. 32.89
17. A set of page-proofs, partly interleaved and abundantly annotated by S., of the first ed. of the *Compendium Flora Britannicae*, prepared for the second ed., with draft preface. 8vo. 33.1
18. Annotated copy of the pamphlet *Considerations respecting Cambridge*, etc., 1818. 60 pp. 8vo. 34.1
19. Pamphlet entitled *The Deed of Foundation of Dr. Thomas Plume*, etc. N.D. 11 pp. 8vo. 34.31
20. Pamphlet entitled *Strictures on Sir J. Smith's Hypothesis relating to the Lilies of the Field . . . and the Acanthus of Virgil*. Reprinted with additions from the *Christian Remembrancer*, 1819. Inscribed "Sir James Smith with the Author's compliments." 11 pp. 8vo. 34.37
23. Annotated copy of S.'s pamphlet entitled *A Defence of the Church and Universities of England*, etc. 1819. 107 pp. 8vo. 34.44
24. Copy by S. of a quotation from the "Spectator." 1 fo. 34.102
25. List of persons to whom the Cambridge pamphlet [No. 18 above], was sent. By S. 1 fo. 34.103
26. Copies of letters relating to No. 23 above, from William Roscoe, Elizabeth Coke, Samuel Goodenough, Alex. MacLeay and Dawson Turner, with a duplicate set of copies by Lady S. 13 fo. 34.104
27. Notes by S. on No. 20 above. 34.116

SECTION V.

MANUSCRIPT NOTEBOOKS.*

1. A botanical notebook, dated 1779. 21 fo. written upon, the rest blank. Index (unfinished), fo. 1-7, 19-21; Miscellaneous notes, fo. 8-13; "Orthonomia Botanica, or the true pronunciation of Botanic Words" (alphabetical), fo. 14-18. All S.'s autogr. **35.1**
2. Catalogue of plants sent to Liverpool. Stationer's notebook of about 100 leaves, parchment covers. 61 fo. written upon, the rest blank. Contains a long list of plants sent by S. to the Liverpool Botanic Garden. **36.1**
3. British Lichens. Two exercise-books with marbled covers bound together, with some extra sheets. The two books contain a catalogue of British Lichens with references, copied by S. from a MS. of Dawson Turner. The first book is dated 13 Dec., 1805, the second is marked "begun Oct. 11, 1804." 35 fo. On the extra sheets are notes on Lichens, by S., "made at Yarmouth, 1800," 2 fo., and a letter from John Harriman to the Bishop of Durham [see § I, s.v. BARRINGTON], dated Gainford, Sept. 2, 1806, enclosing observations on Lichens. 6 fo. **37.1**
4. List of Lepidoptera. "Copied from a MS. of Mr. Wm. Jones, Chelsea." Stationer's notebook of about 100 leaves, with parchment covers. 30 fo. written upon, the rest blank. Contains a list of Lepidoptera and notes thereon, not by S. 25 fo. At the other end of the book, in S.'s autogr., "Phrases and their authorities by Dr. Baillie." 5 fo. **38.1**

* Other notebooks are included in § VI.

SECTION VI.

VARIA—SCIENTIFIC.

1. "An Essay on Collecting and preserving Specimens of Plants, read before the Society for the Investigation of Natural History at Edinburgh, April 19th, 1782, by Jas. Edwd. Smith, of Norwich." 38 fo. 18 × 11 cm. **39 . 1**
2. "On the Phænomena of Vegetable Odours. Read before the Society for the Investigation of Natural History at Edinburgh. Dec. 19th, 1782, by Jas. Ed. Smith, of Norwich." 14 fo. written on both sides. 20 × 16 cm. **39 . 39**
3. A shorter paper with the same title, dated 19 Aug., 1783. 2 fo. Written both sides. 38 × 24 cm. **39 . 53**
4. Letter from Studley Martin, dated Liverpool 15 Jan., 1873, to Lady S., enclosing table of differences between the two foregoing, and letter from Lady S. dated Lowestoft 27 Jan., 1872, enclosing same to the Linnean Society. **39 . 55**
5. Pocket notebook with marbled covers entitled "Desiderata Banksiana, Jan. 1785." Contains a list, by S., in two columns to the page, of about 2,000 species. Some of the entries are cancelled in red ink, and of these species, S. supplied Banks with specimens from the Linnean Herbarium. 18 fo., written on both sides. 16 × 10 cm. **39 . 62**
6. A glossary of Greek names of plants with their Latin equivalents. Headed "J. E. Smith, e. MSS. amici opt. Hugonis Rose." Undated, but anterior to 1792, probably much earlier. 6 fo., written on both sides. 20 × 16 cm. **39 . 81**
7. "A Natural History of North American Insects, particularly those of the State of Georgia . . . by John Abbot." In Abbot's autogr., undated, but prior to 1797. 18 fo., written on both sides, incomplete. 20 × 16 cm. [This MS. was the basis of S.'s publication *Nat. Hist. of the Rarer Lepidopterous Insects of Georgia*, London, 1797.] **39 . 87**
8. Pocket notebook, headed "Remarks on the Dillenian Herb. made at Oxford, May 12, 1803." By S. 8 fo., written on both sides. 15·5 × 10 cm. **39 . 105**
9. Description of *Parmelia Borreri* and *Lecidea aromatica*, dated 1806. Not by S. 2 fo., 37 × 23 cm. [See § I, s.v. BORRER, No. 6.] **39 . 113**
10. Critical notes on the *English Botany*. Writer unknown. Undated. 14 fo., on both sides. 19·5 × 16 cm. **39 . 115**
11. Notes on a Resin Tree. Writer unknown. Undated. 2 fo. 23 × 19 cm. **39 . 129**
12. Characters of a species marked by S. "Jacquinia nov. sp." and description of "Nutmeg tree mention'd in Long's Hist. of Jamaica." Autogr. possibly of Dr. Thos. Dancer. Undated. 3 fo. 26 × 21 cm. **39 . 131**
13. Characters of *Aretia helvetica* and three other plants with specimens, annotated by S. Undated. Writer unknown (foreign). 1 fo. 24 × 18 cm. **39 . 134**
14. Comments on various determinations in *Eng. Bot.* Dated Henfield, Dec. 15, 1813. Signed W. B[orrer] Jun. 2 fo. 24 × 19 cm. [See § I, s.v. BORRER, No. 7.] **39 . 136**
15. "Thoughts on the Study of Nature by Mr. Merlet de la Boulaye, Secretary to the Botanical Society of Angers." By S. Undated. 6 fo., both sides. 32·5 × 21 cm. **39 . 138**
16. Observations on *Conferva gelatinosa* and *C. atra*. Possibly by Dawson Turner. Undated. 2 fo. 26 × 21 cm. **39 . 144**
17. Descriptions of two alpine plants. Lat. Writer unknown. Undated. 2 fo. 32 × 21 cm. **39 . 146**

Varia—Scientific.—Continued.

18. Descriptions of *Jonesia Asoca* by Sir Wm. Jones and by William Roxburgh. Undated. Initialled W. R. 2 fo. 33×20.5 cm. [See §I, s.v. ROXBURGH, No. 7.] 39.148
19. List headed, "Mr. de Saussure's Lichens of the Col du Géant sent to Smith by Mandrot 1792." Writer unknown. 1 fo. 36×22 cm. 39.151
20. List headed "Plants to send to J. E. S. by Mr. Mandrot 1794." 1 fo. 36×22 cm. 39.152
21. List headed "List of Seeds for Dr. Smith from Dr. Buchanan, Botanical Garden, Bengal, Sept., 1799." [161 species.] 2 fo. 32.5×20.5 cm. 39.153
22. List headed "Salices from Mr. Crowe's garden, 1803." 2 fo. 33×20.5 cm. 39.155
23. List headed: "Salix. Mr. Crowe's garden." By S. [42 + 16 species, with references.] 1 fo. 36×23.5 cm. 39.157
24. Another similar list, much worn, probably draft of No. 23. 2 fo. 30×18.5 cm. 39.158
25. List headed "Willows for Mrs. Mackie to be had at Mrs. Crowe's." By S. [15 species of *Salix*.] 1 fo. 22.5×19 cm. 39.160
26. List headed "Huds[on] & With[erlin]g—Conf[ervae]." By S. [9 species, also 5 species "from Vaucher" and 1 sp. "from Mr. Turner's herbm."] 1 fo. 25.5×21 cm. 39.162
27. List headed "Conferva." By S. 1 fo. 34×21.5 cm. 39.163
28. List headed "Ceramium." As last. 39.164
29. List of plants without heading. Writer unknown, annotated by S. [Written on the back of a printed leaflet dated 11 July, 1802. See below, No. 40.] 1 fo. 33×21.5 cm. 39.165
30. List headed "Guernsey lilies." By S. 1 fo. 24×18 cm. [A list of persons, presumably to whom specimens were sent.] 39.166
31. List headed: "Mr. Backhouse's desiderata." Written by B., dated 15 Mar., 1814, and signed. 2 fo. 23×19 cm. 39.167
32. List headed "Seeds given to Loddiges—Feb. 25, 1826 (from Mrs. J. Stacey)." 1 fo. 24×19 cm. 39.169
33. List headed "Tulips marked—May 24, 1824." By S. 1 fo. 12×9 cm. 39.170
34. List headed by S. "Sent Sept. 1820 by J. F. S. & Dec. 20 by do." Writer unknown. 2 fo. 25.5×20 cm. 39.171
35. List headed "Cuttings sent Prof. Mertens. Apr. 1, 1818." By S. [18 species of *Salix*.] 1 fo. 18×17.5 cm. 39.173
36. List headed "Seeds collected at the River Derwent, Van Diemen's Land, 1817-8." Endorsed "For Edward Lord, Esq." Writer unknown. 1 fo. 32×21 cm. 39.174
37. List headed "A Catalogue of the rarer plants growing wild in the neighbourhood of Settle, Yorkshire, within a circuit of about 10 miles. Found by J. Windsor." 2 fo. 25×20 cm. 39.175
38. List headed "Catalogue des plantes en harbier." Unsigned and undated (watermark, 1819). 2 fo. 33×20.5 cm. 39.177
39. Notes on Mosses and other Cryptogams. By S. At the foot of the first sheet is the date 13 July, 1779, but the list is later as a letter dated 1803 is quoted in it. 1 fo. 33×20 cm. 39.179
40. Fragment of a list in same handwriting as No. 29 and perhaps part of it. 39.180
41. List headed "Andrews" with references. [Probably notes on H. C. Andrews's *Botanist's Repository*, 1797-1812.] By S. 1 fo. 35×22 cm. 39.181
42. List headed "List of Hudson's Collection of Insects," Unsigned and undated. 1 fo. 34×21 cm. 39.183
43. List headed "Note of a Collection of Russian Minerals." Unsigned and undated. 2 fo. 32.5×20.5 cm. 39.184
44. Letter dated Soho Square, 6 Jan., 1830, from David Don to Lady S. enclosing a list of S.'s contributions to Rees's *Cyclopaedia*, and a rough list in pencil by Lady S. 6 fo. 39.187
45. Wrapper enclosing tracings of 28 drawings for the *Lachesis Lapponica*. 39.193
46. Miscellaneous notes, jottings, labels and slips found loose amongst S.'s papers. 10 fo. various sizes. [One is in the autogr. of A. B. Lambert and another in that of John Latham.] 39.233

SECTION VII.

VARIA—GENERAL.

1. Accounts with White and others for the purchase and sale of books, 1796–1815, including a list of lots bought by White for S. at the Davall Sale [17 June, 1803]. 12 fo. Various sizes. **40 . 1**
2. Particulars by S. of the four children at one birth of Dr. Rigby of Norwich, 1817. [See §I, s.v. GOODENOUGH.] 1 fo. **40 . 13**
3. Notes on the Norwich Shawl Industry, commenced 1784. 1 fo. [Probably procured for Thomas PENNANT, see §I, s.v., No. 20.] **40 . 14**
4. Fragment of a letter found in a book belonging to Pennant referring to the purchase of the Linnean collections by S., and a letter dated 15 Nov., 1913, from W. Wesley & Son, presenting it to the Linn. Soc. 2 fo. **40 . 15**
5. Draft by S. of his "Irregular Election Ode," which was printed. [See §VIII, No. 29.] 4 fo. **40 . 17**
6. Notes by S. on Reigate Priory and the Manor of Kinnersley. 1 fo. **40 . 21**
7. Description of a new kind of lock that cannot be picked. Writer unknown. 1 fo. **40 . 22**
8. Extract by S. from the *Edinb. Review* on the French Protestants. **40 . 23**
9. Copy by S. of the epitaph of Dr. Wm. Withering (1741–1799). 1 fo. **40 . 24**
10. Draft by S. of an obituary notice of the Marchioness of Rockingham. 3 fo. [See §I, s.v. WATSON. WENTWORTH, No. 63.] **40 . 25**
11. Verses on a friend leaving England for Germany. By M. F. S. Undated. 1 fo. **40 . 28**
12. Tabular diagram endorsed by Lady S. "Arrangement and names of the Marbles collected in Italy and Scotland by Sir J. E. Smith, and set in a table by Mr. Freeman, of Norwich, in June, 1826. Now in the possession of Mr. & Mrs. Geo. H. Liddell, Dean's Yard, Westminster. A present from their Aunt, Pleasance Smith." 2 fo. **40 . 29**
13. Three slips in the autogr. of S., presented by the Rev. A. J. Fellowes in 1927. **40 . 31**
14. Perpetual Ticket of Admission to Bullock's Museum. Signed by W. Bullock and sealed. **40 . 34**
15. Five invitation-cards to various dinners. **40 . 35**
16. Medical prescription by S. Undated. **40 . 41**
17. Verses sent as a Valentine to S. in fancy embossed envelope. Unsigned and undated. **40 . 42**
18. Complimentary note to S. by M. Guyon, attached to the wrapper of a letter. Undated. **40 . 44**
19. List of mourners at S.'s funeral who received hatbands and gloves. By Lady S. 2 fo. [1828.] **40 . 46**
20. Draft epitaph of S. By Lady S. **40 . 48**
21. Inscription on the memorial tablet to S. in the church of St. Peter Mancroft, Norwich. [1885. Printed.] **40 . 49**
22. Photographs of the exterior and interior of St. Margaret's Church, Lowestoft, where S. is buried. **40 . 50**
23. Extract from S.'s will relating to the disposal of his collections, and letters relating thereto [Modern copy made in 1926.] **40 . 52**
24. Tracings of signatures engraved as facsimiles in Lady S.'s *Memoir* of S., and a list thereof by her. 8 fo. **40 . 56**
25. List of persons to whom presentation copies of the *Memoir* were sent. By Lady S. 2 fo. **40 . 65**

SECTION VIII.

PRINTED MATTER.

1. Biographical Notice of S. read at the Royal Soc. of Edinburgh, 5 Jan., 1829, by the Rev. E. B. Ramsay. From the <i>Edinb. Journ. of Science.</i> 16 pp. 8vo.	40 . 67
2. Notice of the election of James Smith [father of J. E. S.] as a shareholder in the Sierra Leone Company. Dated 29 Mar., 1792.	40 . 75
3. Report of the Directors of the Sierra Leone Co., 19 Oct., 1791. 34 pp. 12 mo. [Enclosed in No. 2.]	40 . 76

CATALOGUE OF THE MANUSCRIPTS IN THE LIBRARY OF THE
LINNEAN SOCIETY OF LONDON. PART II.

CAROLI LINNAEI
DETERMINATIONES IN HORTUM
SICCUM JOACHIMI BURSERI

THE TEXT OF THE MANUSCRIPT IN THE LINNAEAN
COLLECTIONS, EDITED BY SPENCER SAVAGE, F.L.S.

LONDON :

PRINTED FOR THE LINNEAN SOCIETY, BURLINGTON HOUSE, PICCADILLY, W.1,
BY TAYLOR AND FRANCIS, LTD., RED LION COURT, FLEET STREET, E.C. 4.

1937.

Malo tres alapas a Prisciano quam unam a Naturâ.

(A saying of LINNAEUS.)

PREFACE.

LINNAEUS's study of the plants collected by Joachim Burser * (1583–1639) was a progressive one : as a student at Uppsala University in 1728 ; as a rising naturalist in Holland when he had with him his MS. of 'Fundamenta botanica', in one part of which,—*Differentia specierum*, still unpublished,—he had indicated by dots certain of Burser's plants ; as professor at Uppsala in 1745 when he published a thesis dealing with about 250 of Burser's plants ; as author of the 'Species plantarum' when he made the very careful study which is recorded in the MS. here published for the first time ; and as a world-famous botanist when he still studied them and added some later determinations to his record. The importance of Burser's herbarium to Linnaeus lay in the fact that it was named and arranged according to Bauhin's 'Pinax', which, including all the plants dealt with by western botanists to about the year 1623, comprised an important mass of botanical material with which the reformer of botany had to deal in a way that would convince his contemporaries. For that portion of the 'Species plantarum' it may be truly said that behind Linnaeus stood Caspar Bauhin.

The MS. here printed is in size 32.5×20.5 cm., except for one leaf, 22×13 cm., belonging undoubtedly to Linnaeus's early days at Uppsala. On this smaller leaf is a tabular list comparing the volume-numbers of the herbarium with the divisions in Bauhin's 'Pinax'. The bulk of the MS. occupies 32 closely-written pages, the arrangement and style of which are here reproduced as nearly as possible †. The inscriptions in Burser's hand were much condensed by Linnaeus, who also sometimes misread the old writing. H. O. Juel's 'Joachim Burser's Hortus siccus' (*Symbolae botanicae Upsalienses*, II : 1, 1936) should be consulted for the full readings.

The main portion of this MS. appears to have been written about 1748. From 1746 to 1748 Linnaeus had attempted a draft of the 'Species plantarum', a portion of which still exists. It shows a greater number of synonyms from the early books than appears in the printed version of 1753, in the preface of which he stated that for most European species he had cited the Bauhin synonym and a reference to the best illustration. The early date is also confirmed by the use of many MS. plant-names ‡.

Linnaeus's copy of the second edition of Bauhin's 'Pinax' (1671), which came into his possession in 1730, contains, in addition to generic, about 3000 specific, determinations written by him in the margins. During his preparations for the 'Species plantarum' they constituted his record

* He was a pupil of Caspar Bauhin ; travelled widely in Europe ; and became professor of medicine and botany at Sorø, Denmark, in 1625. His herbarium in 25 vols. was part of the booty in a war between Sweden and Denmark, and is preserved at Uppsala today except for vols. 2 and 5 which were destroyed by fire before Linnaeus's time.

† Certain old contractions used by Linnaeus are here indicated by the use of a colon, but the word 'non' is spelled out and some signs that could be printed have been reproduced. Linnaeus's mistakes are followed by the corrections in square brackets, preceded by =. Uncertain readings of the MS. have been placed in square brackets. The page numbers in Bauhin's 'Pinax' have been added as a help to quick reference.

‡ For further details see 'Studies in Linnaean synonymy. I. Caspar Bauhin's "Pinax" and Burser's herbarium'. (Proc. Linn. Soc. Lond. 148 Sess., 1935–6, pp. 16–26.)

of the older synonymy gathered over many years, and formed as it were a check on his determinations in Burser's herbarium.

There exist two partial sets of determinations of the plants in Caspar Bauhin's herbarium, which is still preserved at Bâle. The determinations made by A. P. de Candolle in 1818 were published in 1904 in the 'Bulletin de l'Herbier Boissier'; and from 1821 to 1845 C. F. Hagenbach published in his 'Flora Basiliensis' his determinations of that part of Bauhin's herbarium required by him.

These three sets of determinations, so far as they can be included as *agreeing* determinations, have been indicated here by the small capital letters following Linnaeus's determinations in Burser's herbarium:—

L = Linnaeus's determination in his copy of Bauhin's 'Pinax' C = de Candolle's determination in Bauhin's herbarium H = Hagenbach's determination in Bauhin's herbarium	} agrees with Linnaeus's } determination in Herb. } Burser.
--	---

These determinations in Burser's herbarium have considerable historical interest, showing Linnaeus in direct touch with the plants of an earlier botanist. Also, by the form in which he has cast his MS. a ready means is provided of noting the changes made in generic names, as well as of showing clearly the faults of the earlier plant-classification. Nevertheless, their more important bearing is on the question of Linnaean type-specimens. Considered generally, these determinations refer to a collection of specimens that Linnaeus could never rearrange or withdraw any as he undoubtedly did in his own herbarium; further, they antedate the first enumeration of the Linnaean herbarium.

Linnaeus's own herbarium at the time of the publication of the 'Species plantarum', 1753, did not contain all the plants he had there described. From three enumerations it is known with some certainty (but in some instances, uncertainty) what he had by the years 1753, 1755 and 1767 respectively. In 1912 Dr. B. D. Jackson in the preface to his 'Index to the Linnean Herbarium' dealt briefly with these enumerations and affixed the numbers 1, 2 or 3 to the plant-names as an indication when Linnaeus obtained a particular species. Dr. Jackson was of opinion that the third enumeration was done from memory, but the reason given is not very convincing. The second enumeration certainly could not have been so made, and if we consider why Linnaeus did these enumerations it would seem unlikely that for any he would rely only on his memory. On publishing the 'Species plantarum', Linnaeus with just pride wished to have in his herbarium all the species he had described. He therefore collated one of his interleaved copies of the printed work with his herbarium, his object being to find out what he had *not* got. (As the second volume was not published until August, 1753, and he had to wait until the copy had been bound, he probably did not start work on it until the end of 1753 or beginning of 1754; in which interim he may have received many specimens.) The second enumeration is a copy in MS. form of the first, with additions down to the Spring of 1755. The third enumeration, much later in date, 1767, was Linnaeus's final attempt to produce a list of those specimens he still wanted.

In adding later plants to his herbarium Linnaeus would not have any compunction in naming them as though they were actual type-specimens, and perhaps parting with earlier specimens if replaced by better ones. Therefore, whilst these enumerations cannot be considered as conclusive evidence that he had a specimen by that particular date,—since he may have added

markings to an enumeration years after the date when he drew it up,—they, with certain corrections (see below), must be accepted as the only comprehensive information at the present time of what he had at the three dates mentioned. Nothing short of a careful codification of all references to plants sent to Linnaeus could give an adequate list of dated specimens. Of course certain sheets have signs, &c. that leave but little doubt from whom the plants were received, but even here there are anomalies.

A considerable number of the plants described in the first edition of the 'Species plantarum' cannot be said to have type-specimens in the ordinarily accepted sense. Linnaeus renamed and placed systematically a large number of plants that had been known to botanists for centuries,—a different thing from naming and describing a species for the first time. The Linnaean 'type' of any such well-known species will surely be found to consist of *all* the surviving herbarium specimens determined by Linnaeus at the time he wrote the diagnosis. A 'species' in Linnaeus's sense was not founded on an individual specimen, but was rather an intellectual concept of a natural group, even though that group was part of an artificial system. The specimens he determined he considered to be typical of such a group. Such authentic specimens considered together must afford better evidence than specimens added, perhaps hurriedly, to his herbarium at a later date.

In his preface to the 'Species plantarum' Linnaeus places Burser's herbarium first in the list of herbaria consulted. Apart from those of his friends such as Abraham Bäck, his own and Burser's were the two herbaria on which he had to rely when dealing with European plants in the 'Species plantarum'. It is true that he does not cite Burser's herbarium very often, but, then, he does not cite his own. The MS. here printed supplies his determinations to vols. 1, 3, 4, 6–22 of Burser's herbarium as fully as if he had written them under the plants, as he actually did in vol. 25. In one sense, as explained above, all these determinations are equally important; in another, restricted sense, the importance of some of them in relation to Linnaean types will result in Burser's herbarium becoming better known to the systematist.

In the Appendix I have given a tentative List of those determinations which, on bibliographical grounds, appear to have special reference to the Linnaean types. A systematist comparing the plants of the two herbaria would probably add many more names to the List.

CORRECTIONS TO THE ENUMERATIONS IN THE 'INDEX TO THE LINNEAN HERBARIUM', 1912.

The figure 1 (indicating that Linnaeus included it in his 1753 enumeration) should be added to *Adiantum flabellulatum*, *Agrostis capillaris*, *A. minima*, *A. stolonifera* and *A. virginica*, *Aira spicata*, *Alyssum incanum*, *Anemone trifolia*, *Arachis hypogaea*, *Artemisia crithmifolia*, *Asclepias curassavica*, *Asphodelus luteus*, *Bontia daphnooides*, *Bryum viridulum*, *Caltha palustris*, *Campanula patula*, *C. rhomboidalis*, *Cardiospermum Halicacabum*, *Carduus eriophorus*, *Convolvulus sieculus*, *Cornus canadensis*, *Daphne indica*, *Dentaria pentaphyllos*, *Fagus sylvatica*, *Festuca fluitans*, *Hedysarum repens*, *Hibiscus esculentus*, *H. mutabilis*, *H. virginicus*, *Hyacinthus amethystinus*, *Hydrangea arborescens*, *Iris germanica*, *I. susiana*, *I. variegata*, *Ixora coccinea*, *Juglans alba*, *Jussiaea erecta*, *Laserpitium Siler*, *Lathyræa Squamaria*, *Leonurus sibiricus*, *L. tataricus*, *Lichen ciliaris*, *L. islandicus tenuissimus*, *L. pallescens*, *L. physodes*, *Linum maritimum*, *Lythrum lineare*, *Mentha Pulegium*, *Mnium fontanum*, *M. palustre*, *Morus tatarica*, *Nepeta multifida*, *Orchis abortiva*, *Osmunda Lunaria*, *Osyris alba*, *Paullinia polypylla*, *Penaea mucronata*, *Phillyrea latifolia*, *Pinus Larix*, *Piper aduncum*, *Pistacia vera*, *Rhamnus Frangula*, *Salvia verticillata*, *Santolina rosmarinifolia*, *Saxifraga Hirculus*, *S. rotundifolia* no. 19,

Scirpus romanus, *Sedum Cepaea*, *Senecio trilobus*, *Silene conica*, *Sinapis hispanica*, *Sonchus oleraceus*, *S. tenerrimus*, *Tilia europaea*, *Triglochin palustre*, *Veronica multifida*, *Xeranthemum speciosissimum*.

The figure 2 (=the enumeration of 1755) should be added to *Aenida cannabina*, *Arenaria montana*, *Borago orientalis*, *Chrysanthemum alpinum*, *Cistus ladaniferus*, *Cynosurus aureus*, *Festuca barbata*, *Gaura biennis*, *Geranium acutum*, *Gnaphalium dioicum*, *G. plantaginifol.*, *Hippocratea unisiliquosa*, *Hymenaea Courbaril*, *Orobus tuberosus*, *Salvia indica*, *Scabiosa graminifolia*, *Serratula spicata*, *Valeriana Cornucopiae*.

The figure 3 (=the enumeration of 1767) should be added to *Ajuga alpina*, *Anchusa virginiana*, *Bunium Bulbocastanum*, *Bupleurum stellatum*, *Cacalia alpina*, *Coronilla minima*, *Dianthus carthusianorum*, *Hedysarum Caput-galli*, *Heliotropium supinum*, *Lagurus cylindricus*, *Laurus Benzoin*, *Leontice Leontopetalum*, *Nama jamaicensis*, *Olea americana*, *Piper obtusifolium*, *P. pellucidum*, *Pisum sativum*, *Polymnia Uvedalia*, *Polyodium cicutarium*, *Ricotia aegyptiaca*, *Rubus parvifolius*, *Scirpus capitatus*, *S. geniculatus*, *Solanum lycioides*, *S. sanctum*, *Spermatoce verticillata*, *Varronia bullata*, *Vicia Faba*, *Viola calcarata*.

The following are not included in any enumeration — *Abrus precatorius*, *Amygdalus communis*, *Antirrhinum dalmaticum*, *Echium lusitanicum*, *Elaeagnus angustifolia*, *Fucus nodosus*, *Lathyrus pratensis*, *Narcissus Jonquilla*, *Perdicium semiflosculare*.

Insert both name and number : *Camphorosma Pteranthus 3.*

[N.B.—A further examination of the third enumeration would probably add some more instances where the figure 3 should be added to certain species.]

S. S.

APPENDIX.

Tentative list, in alphabetical order, of Linnaeus's determinations in Burser's herbarium which, on account of there being no specimens or only late or doubtful ones in the Linnaean herbarium, may be considered as having reference to the Linnaean types.

[N.B.—A few of Linnaeus's determinations written in vol. xxv of Burser's herbarium are included here, although there appears to be no evidence when those were actually written.]

CATALOGUE OF THE MANUSCRIPTS IN THE LIBRARY OF THE
LINNEAN SOCIETY OF LONDON. PART III.

SYNOPSIS OF THE
ANNOTATIONS BY LINNAEUS
AND CONTEMPORARIES IN HIS
LIBRARY OF PRINTED BOOKS

BY SPENCER SAVAGE, F.L.S.

LONDON:

PRINTED FOR THE LINNEAN SOCIETY, BURLINGTON HOUSE, PICCADILLY, W.1,
BY TAYLOR AND FRANCIS, LTD., RED LION COURT, FLEET STREET, E.C.4.

1940.

'My son Professor Carl Linné, who on account of my small merit, is enjoying from his Royal Majesty or the recommendation of States general the professorial chair, which I have held, does not participate in any of my estate or any of its æquivalent in value; but he is to receive my Bibliothèque, from which, if, in combination with the professorial chair, he uses it with the same industry as I have done in my time, he will derive greater benefit than all his sisters together.'

(Clause in Linnaeus's Will. From an early translation among the Linnaean Manuscripts.)

PREFACE

EXCEPT for about one-sixth represented by certain medical and general works presented in 1894 to the Royal Academy of Sciences, Stockholm, and a few that never reached the Society, the library of Linnaeus remains in the possession of The Linnean Society of London. No book included in that one-sixth has a direct bearing on Linnaeus's work as a naturalist, although we may regret the absence of his copies of De Wit's *Atlas*, Vesalius's *Anatomy* and the *Bible* in Swedish.

Linnaeus was not a bibliophile, nor an assiduous book-collector. His library always remained merely part of the necessary tools for his life-work—the investigation and classification of all known living organisms. He did not share with many of his contemporaries their rage for 'tall copies' and elegantly bound volumes. His early poverty is still witnessed by the poor but strong bindings of some of the books in his possession from his early days at Wexiö, Lund and Uppsala; and although at one period some of his own early works were bound in full polished calf with the titles and name in gold lettering on the front covers, he appears nearly always to have been indifferent to anything except the content of a book.

About 1600 works at present constitute the library of Linnaeus. Between one-fifth and one-quarter contain annotations either by Linnaeus or his contemporaries. The unannotated works, being the actual copies consulted by him, retain value as witnesses. Where we might have expected a considerable amount of annotation—in the Herbals, for instance—we find practically none at all. Either Linnaeus dealt with such volumes in Clifford's library at Hartecamp, or he rarely had need to go behind Bauhin's *Pinax*—at any rate so far as annotation was concerned. Some exceptions are his identifications to certain of the illustrations in Colonna's *Ekphrasis*, 1616, and many generic names in the margins of Caesalpinus (*De plantis*, 1583).

This Synopsis is divided into seven sections, as follows.

1. *Signatures and inscriptions on title-pages and fly-leaves.* This is subdivided into those by Linnaeus and those by his contemporaries.
2. *Linnaeus's annotations in his own works or those edited by him.* The entries are arranged under the short titles. Many of these annotations are of the greatest value to those consulting the Linnaean Collections.
3. *Linnaeus's botanical identifications in the works of other authors (including some records of determinations).* In this Synopsis the word 'identification' is used when the plant- or animal-names were written after consideration of the descriptions or illustrations in a book; 'determination' being reserved for use where it is clear that the names were written after examination of actual specimens.

4. *Linnaeus's zoological identifications in the works of other authors.* In Dezallier d'Argenville, on Shells, most of the splendid figures in the plates have not only Linnaeus's identifications but numbers also, thereby probably linking them with the actual specimens of Linnaean Mollusca.
5. *Linnaeus's miscellaneous annotations in the works of other authors.* Of special general interest is a folio of Seneca's Writings, bearing a late signature, with many passages apparently marked by Linnaeus.
6. *The younger Linnaeus's annotations.* All the annotations by the younger Linnaeus are brought together in this section.
7. *Annotations by other contemporaries of Linnaeus.* This is a small section, arranged under annotators' names.

Linnaeus had the gift of noting down quickly in the right place the information he would require for future work. He wrote nothing trivial or meaningless. Here, as elsewhere, shines the gem-like flame of his genius.

S. S.

23 May 1940.

- FUNDAMENTA BOTANICA. Ed. 2. 1740. Many corrections and additions.
- BIBLIOTHECA BOTANICA. 1736. [3 copies].—*N°. 3. Typus absolutus 1735 Sept. 9 Stylo veteri.* Copious additions.

- MUSA CLIFFORTIANA. 1736. [2 copies].—Many additions, including four lines of verse by J. A. Roell differing from the printed version which is loosely inserted. Also a long poem by J. H. Jungius, with note, *Dabam e Museo meo Lugduni Batav. d. 5 apr. 1736.*
- FLORA LAPPONICA. 1737. [2 copies].—Corrections and notes. Quotations from Virgil and Ovid (printed by J. E. Smith in his edition, 1792). A poem by Petrus Werloes does not appear to have been printed.
- GENERA PLANTARUM. Ed. 1. 1737. [2 copies].—Corrections and additions. Four lines of verse beginning *Haec non sola mihi patefecit opinio famae vulgaris . . .* One copy has MS. title-page, *Species Plantarum*, and is copiously annotated with the old species names; and a copy of Boerhaave's letter to Linnaeus dated 13 Jan. 1737 is pasted in. One drawing. (On 14 Nov. 1752 Linnaeus gave this copy to his son.)
- GENERA PLANTARUM. Ed. 2. 1742.—Corrections and additions.
- GENERA PLANTARUM. Ed. 5. 1754.—Corrections and additions. Impression of one of Linnaeus's Seals.
- GENERA PLANTARUM. Ed. 6. 1764. [3 copies].—Corrections and additions. Drawings of forms of leaves.
- CRITICA BOTANICA. 1737.—A few corrections and additions. Two lines of verse.
- VIRIDARIUM CLIFFORTIANUM. 1737. [2 copies].—Omissae et errata. Certain species numbered from 1 to 693. (Note.—This may have some reference to the dried plants Linnaeus received from Clifford's Herbarium.)
- HORTUS CLIFFORTIANUS. 1737.—Many corrections and additions.
- CLASSES PLANTARUM. 1738. [2 copies].—Corrections and additions.
- ARTEDI. Ichthyologia. 1738.—A few corrections and notes. Binomials added to part 4. *improbe mortalis . . .* [2 lines of verse]. *Sic vos, non vobis . . . Sic nos, non nobis.* A 4-lined epitaph, *In humilum Artedi* by A. Celsius (? in his handwriting) and an English translation by G. Shaw in J. E. Smith's handwriting.
- GRONOVIUS. Flora Virginica. 1739, 1743. (See § 3.)
- TAL OM MÄRKWÄRDIGHETER UTI INSECTERNE. 1739.—Corrections and additions.
- SYSTEMA NATURÆ. Ed. 2. 1740.—Copiously corrected and annotated. Quotations from Virgil, Ovid and Seneca. One page of Latin and Swedish botanical terms.
- SYSTEMA NATURÆ. Ed. 6. 1748.—Many corrections and additions. Four lines of Latin verse. List headed *Genera nova* [plants].
- SYSTEMA NATURÆ. Ed. 10. 1758-9.—Many corrections and additions. The Insecta species-numbers are underlined to indicate the specimens in Linnaeus's collection. Glossary of English and Latin bird-names. Drawings of Cochineal insect (by John Ellis) and another insect.
- SYSTEMA NATURÆ. Ed. 12. 1766-8. [3 copies; also 1 copy of Vol. 1].—(1) A few corrections. Note on number of known genera and species. Notes on Insects. The species-numbers of the plants are underlined to denote when specimens are in the Herbarium. Painting on vellum for proposed Coat-of-Arms; another on paper. Engraving of a medal. (2) Many corrections. Many names of plant-species have dots against them. Long list of classical personal names,—Helena, Ulysses, etc. (3) A few notes. The Insecta species-numbers are underlined to show what specimens Linnaeus had in his collection. (4) Copious corrections and additions. Two lines from Pliny VIII : 1. Some of Linnaeus's last annotations appear to be entered in this volume.

- ORATIO DE TELLURIS HABITABILIS INCREMENTO. 1744. [2 copies].—A few corrections and additions, including some notes of a general character. Five lines of verse from Seneca in medicam, beginning *Venient annis secula seris . . .*
- ÖLÄNDSKA OCH GOTHLÄNDSKA RESA. 1745. [2 copies].—(1) Drawing of (?) Salmon fishing spearhead. (Printed road-table pasted in,—dated 1738.) (2) Numbers in the margins against plant-names, referring to the plant-numbers in *Flora Svecica*, ed. 1. Two errata.
- FLORA SVECICA. Ed. 1. 1745.—Many annotations. Ed. 2. 1755. [2 copies].—(1) Appendix of about 70 species, with localities and collectors' names. *Nomina Svecica Veterum Monosyllaba. Flora Svecicæ Appendix 1773* [about 57 names of plants, with localities and collectors' names]. Description of an insect. Notes on plants. (2) Three different Seals used by Linnaeus. Many annotations. Painting of *Ophrys* sp. Addenda,—a list of about 50 plants, with localities and collectors' names.
- FLORA ZEYLANICA. 1747.—Corrections and additions. Note,—*300 species indicæ ad genera reductare differentes*. Two lines from Hippocr. de ære, &c.
- HORTUS UPSALIENSIS. 1748.—As far as p. 79, the species have been numbered consecutively in the margins. *Leges Hortulani Academicæ. Peregrines ignotæ patriæ* [20 names]. Notes on the effect of frost in 1748 and 1750. Notes in Swedish concerning the Garden, 1745–72. *1760 Mesembr: in Horto Upsaliensi* [27 spp., 1 var.].
- DE CURIOSITATE NATURALI. 1748.—Five lines cited from Hermes. Saying of Tycho Brahe; also a reference to his work.
- WÄSTGÖTA RESA. 1747.—Plate 5 has identifications in margin. Note on p. 124 on fly-leaf.
- MATERIA MEDICA. 1749 [2 copies].—(1) Very copiously annotated. On frontispiece,—*experte/crede/fide*. *Pharmacopœa Holmiensis*. Binomials in the margins. (2) Note on Opium.
- DISSERTATIONES ACADEMICÆ.—Notes and corrections in some of the 150 dissertations; also part of corrected copies for *Amoenitatis Academicæ*.
- AMOENITATES ACADEMICÆ. 1749–69.—Annotations. Two of Linnaeus's Seals. Note, *Leporis esculentes*. Vol. 6, p. 486, a section in tabular form, *III Fibra*, is added.
- ROBERG. TAL. 1747.—A few corrections. *Natura invisibilis* [loose scrap of MS.].
- FAUNA SVECICA. 1746.—Copiously annotated. Specific names in margins. Painting of insect. Ed. 2. 1761. [2 copies].—(1) A few corrections and notes, including note of plants observed by Retzius in Scania. (2) A few corrections.
- PHILOSOPHIA BOTANICA. 1751. [2 copies].—(1) A few notes. (2) Copy with copious corrections and additions. As Linnaeus did not publish a second edition of this work, many of the annotations may be unpublished material. The following are a few of the more interesting items,—p. 15, glossary of horticultural and agricultural terms (including verbs) in Latin and Swedish; pp. 27–36, an elaboration of his sketch of a Natural System; p. 156, lists of new genera and their authors; p. 303, *Demonstratio* (description in skeleton form of a plant-diagnosis); p. 264, notes on Geographical Botany; p. 243, colours of plants (with diagram); p. 198, pronunciation of certain Latin generic names; p. 96, list of hybrids; [end fly-leaves], *Flores ante explicatione*; list of hybrids; p. 274, *Motos in foliis (in flore)*; p. 286, *Lychnis dioica in horto aō 1759*

albis o[mn]ib[u]s floribus; p. 102, [drawing of a spiral]; p. 99, notes on Species; p. 362, diagnosis of *Lindera*. (Sir J. E. Smith's note on fly-leaf gives, on Dryander's authority, the story of how Linnaeus dictated the book to Loefling.) Impression from Linnaeus's Seal no. VI. A slip pasted in after the preface bears the childish signature of Linnaeus's little daughter Sophia (first noticed by Dr. A. H. Uggla). [The earlier notes appear to have been written in the nearly black ink.]

SKÅNSKA RESA, 1751.—Note on Kuler. Poem in Swedish (18 lines)—Engelsholms akraport. OBSERVATIONES IN REGNUM LAPIDEUM. [1753.]—*a L. Roberg editus*, on p. 1.

INDELNING I ORT-RIKET. 1753.—A few notes.

SPECIES PLANTARUM. 1753. [2 copies].—(1) *Species Novae*; (2) *Emendata et Aucta*. Both copies much annotated. Plant drawing. One copy has the species-numbers underlined throughout, to indicate the specimens in the Herbarium.

SPECIES PLANTARUM. Ed. 2. 1762–3. [2 copies].—(1) Copiously annotated. The fly-leaves contain miscellaneous notes on people, plants and books. A list dated 1770 of botanists arranged under countries. A list of printed books, mainly floras, from 1755 to 1768. The Index generum has many MS. numbers added to the names,—these refer to the page-numbers in Syst. Nat. ed. 12, 1767. (2) A few notes on plants on a fly-leaf.

MANTISSA PLANTARUM. 1767; MANTISSA PLANTARUM ALTERA. 1771. [2 copies of each].—(1) Corrections. (2) Linnaeus's last corrections.

HASSELQUIST. ITER PALAESTINUM. 1757.—Note on the Nile on end fly-leaf.

LOEFLING. ITER HISPANICUM. 1758.—A few notes.

GENERA MORBORUM. 1763. [2 copies].—Both annotated.

CLAVIS MEDICINAE. 1766.—Annotated.

SYSTEMA VEGETABILII. Ed. 13. 1774. [2 copies].—A few annotations in each.

[A COLLECTION of a 4-paged Address to Uppsala University, in folio, 1754, used as temporary herbarium sheets by Linnaeus, c. 1771.] The plant-names are written on the fourth page of each copy of this Address.

[LIST of Latin (mostly generic) plant-names, with the English common names written against them. fol. 2 pp. double-column on wrapper of the genus *Nitraria* in Herb. Linn.]

3. LINNAEUS'S BOTANICAL IDENTIFICATIONS IN THE WORKS OF OTHER AUTHORS (INCLUDING SOME RECORDS OF DETERMINATIONS).

[Note.—'Identif. in marg.' means that Linnaeus has written his plant names in the margins.]

ALLIONI. Rariorum Pedemontii stirpium specimen primum. 1755. (Identif. in marg., both text and plates.)

—. Stirpium praecipuarum littoris et agri Nicæensis enumeratio methodica. 1757. (Identif. in marg.)

ALPINUS. De plantis Aegypti liber. 1640. (A few generic identif. to the illustrations; in one, Hasselquist's name.)

—. De plantis exoticis libri duo. Ed. alt. 1656. (Tournefort's names to some of the plates.)

- AMMANN. Stirpium rariorum in Imperio Rutheno sponte provenientium. 1739. (Identif. in marg., both text and plates. On end fly-leaf is a full diagnosis of '*Lapathum Dauricum*').)
- ARDUINO. Animadversionum botanicarum specimen. 1759. [2 copies].—(1) Identif. of a species of *Salvia*. (2) List of identif. on front fly-leaf; also identif. on the plates.
- BAUHIN. Pinax. 1671. (Identif. in marg. Generic names from about 1730; specific names about 1748—.)
- BERGIUS. Descriptiones plantarum ex Capite Bonae Spei. 1767. (Identif. in marg. At p. 306, an MS. list inserted. The end fly-leaf has a short index; also short diagnoses of *Phylica imberbis*, *Gnaphalium mucronatum* and *Othonna parviflora*, which Linnaeus published in Mant. 2 as species of Bergius.)
- BOCCONI. Museo di piante rare. 1697. (Generic identif. on one or two of the plates, with an index on front fly-leaf.)
- BOEHMER. Flora Lipsiae indigena. 1750. (On end fly-leaf are brief notes on 11 of the plants.)
- BOERHAAVE. Index alter plantarum quae in Horto Academicus Lugduno-Batavo aluntur. 1720. (Some generic identif. on pp. 263–270, and binomials to Plates referring to pp. 184, 185, 187–198, 200, 202–206,—mainly Cape plants.) [Note.—The printed underlining of the plant-numbers, referring to officinal plants, in this work, no doubt suggested to Linnaeus the use of this method of underlining.]
- BREYNIUS. Prodromi fasciculi rariorum plantarum primus et secundus. 1739. (Identif. on many of the plates.)
- BROWNE. Civil and Natural History of Jamaica. 1756. (Record of determinations in Browne's herbarium, purchased by Linnaeus in 1758.)
- BURMAN, J. Catalogi duo plantarum Africanarum. 1737. (The entries are numbered 1 to 1169, with references to Commelin and Burman.)
- . Thesaurus Zeylanicus. 1737. (Early generic identif. in marg., with later specific identif. added both in marg. and on the plates. Corrections and notes. List of identif. on the plates on end fly-leaf.)
- . Rariorum Africanarum plantarum Decas prima (-decima). 1738–9. (Identif. on the plates, with index on end fly-leaf. On front fly-leaf, note,—*Figuræ omnes, quas habuit Auctor a VAN DER STELL non modo male sed et perfide delineatæ sunt*—with list of plate- and figure-numbers.)
- BURMAN, N. L. Flora Indica; cui accedit series Zoophytorum Indicorum, et Prodromus florae Capensis. 1768. (A few notes in Fl. Ind. In the Prodr. a few notes, and a number of markings in the margins.)
- BUXBAUM. Plantarum minus cognitarum centuriae V. 1728–40. (Identif. on some of the plates.)
- CAESALPINUS. De plantis libri XVI. 1583. (Many generic identif. in marg.)
- [CELSIUS.] Plantarum circa Upsaliam sponte nascentium catalogus. (Act. Lit. et Scient. Sueciae.) 1732. [3 copies].—(1) Some generic names underlined. The name *Linnaea* added on p. 36; on pp. 15 & 16, the generic names of the grasses added in the margins. (2) A few additions. Note,—*Celsii species 824 Varietat. 112* [Total] 712. Dots in front of many plant names, and a few are bracketed. Is this Linnaeus's

record of his examination of Celsius's herbarium ? (3) Has MS. title-page,—*Flora Uplandica*. A few corrections and additions. Entries numbered 1 to 821. On 4 folios at end, Index arranged according to the Sexual System. Notes of two Swedish plant-localities.

COLONNA. Minus cognitarum stirpium ἔκφρασις. 1616. (Identif. to many of the illustrations.)

COMMELIN, C. Flora Malabarica. 1696. (Many generic identif. in marg.)

—. Horti medici Amstelaedamensis plantae rariores et exoticae. 1706. (Many identif. on the plates.)

COMMELIN, J. Horti medici Amstelodamensis rariorum plantarum descriptio et icones. 1697, 1701. (Identif. on the plates, first in pencil, then in ink.)

—. Catalogus plantarum indigenarum Hollandiae. Ed. 2. 1709. (Entries numbered 1-776.)

DALIBARD. Florae Parisiensis prodromus. 1749. (Ten errata noted on end fly-leaf.)

DILLENIUS. Catalogus plantarum sponte circa Gissam nascentium. 1719. (A few notes in the text. On front fly-leaf, note of the number of flowering plants in the work. On end fly-leaf, notes on *Mesomora* and *Dortmanna*, with two cuts of the former plant pasted in. J. E. Smith has note that these cuts probably come from Roberg's Dissertation de Groes : oeâ.)

—. Hortus Elthamensis. 1732. (J. E. Smith copied at least some of Linnaeus's notes and identif. into his own copy, and sold the Linnaean copy ! Smith's copy is in the Society's possession.)

—. Historia muscorum. 1741. (A few identif. in marg. in pencil ; many identif. on the plates.)

FEUILLÉE. Histoire des plantes médicinales du Pérou et du Chili. 1725. (Some identif. on the plates.)

GÉRARD. Flora Gallo-provincialis. 1761. (Identif. in marg. throughout. On end fly-leaf, a list of the plates mainly with generic identif. only.)

GMELIN, J. G. Flora Sibirica. 1747-69. (Identif. in marg., either in pencil or ink.) [PLATES] (Many identif.)

GMELIN, S. G. Historia Fucorum. 1768. (Some identif. in marg., with references to the plates in another work, e.g. XVI : 3.)

GOEDART. Metamorphosis naturalis. [?1669.] [The plates only.] (Annotated by Linnaeus at an early date and again later. Generic identif. of the plants. Binomial identif. of the insects.)

GRONOVIUS, J. F. Flora Virginica. 1739, 1743. [2 copies].—(1) A few notes in the text. Note on end fly-leaf,—*Sveciae plantae in Virginia nascentes*, with reference by numbers.

(2) Corrections. ED. ALT. 1762. (Identif. in marg. throughout.)

HALLER. Iter Helveticum. 1740. (Generic identif. in marg. in some places.)

—. De Allii genere naturali libellus. 1745. (Specific identif. in marg. in pencil.)

—. Opuscula sua botanica. 1749. (Identif. in marg. in many places.)

—. Enumeratio plantarum. 1753. (Generic identif. in some places.)

—. Ad enumerationem stirpium Helveticarum emendationes et auctaria. N.d. (Identif. in marg.)

- HERMANN. *Paradisus Batavus*. 1698. (Identif. on the plates. Sent to Linnaeus by Collinson in 1745.)
- . *Musaeum Zeylanicum*. Ed. 2. 1726. (Annotations. Generic determinations in the margins. These determinations were made from Hermann's herbarium when it was lent to Linnaeus in 1745-6,—in one instance L. has written *Deest* in the margin, but afterwards has drawn a pencil line to indicate when a specimen is absent.)
- HILL. *Flora Britannica*. 1760. (Identif. in marg. only as far as p. 541.)
- HUDSON. *Flora Anglica*. 1762. (Some of the species-numbers in *Fucus* are underlined.)
- JACQUIN. *Enumeratio systematica plantarum quas in Insulis Caribaeis vicinaque Americes continente detexit novas*. 1760. (Identif. in marg., with numbers added. From evidence of added plant-names and other notes, these are perhaps determinations from the actual specimens. At the end of the volume are inserted 6 proofs of Jacquin's engravings of plants with his MS. names added.)
- JOHRENIUS. *Vade-mecum botanicum*. [1710]. [2 copies].—(1) Generic names in the margins to the unnumbered pages following the preface,—'Plantae generis adhuc ignoti' of the author. (2) Copious annotations. Drawings to illustrate Tournefort's system. Small drawing of *Lenticula*. Some of Tournefort's new genera copied on the fly-leaf. The entries in the printed text are numbered 77 to 650 in the margins, with interpolated numbers preceded by the letter C. [? Celsius].
- KALM. *Ressa til Norra America*. 1753-61. (In vol. 2, 1756, some identif. in marg.)
- KNAUT. *Enumeratio plantarum circa Halam Saxonum sponte . . . provenientum*. 1687. (Generic identif. in marg. as far as p. 11 only.)
- KRAMER. *Elenchus vegetabilium et animalium per Austriam inferiorem observatorum*. 1756. (Identif. in marg. throughout. Notes on fly-leaves,—geographical names, Alpes, etc.; some plant names.)
- KYLLING. *Viridarium Danicum*. 1688. (Binomial identif. in marg. throughout. Note on fly-leaf,—*Mille plantas enumerat. Varietates non ejicit sed auget. nomina CB adhibet. Loca natalia indicat.*)
- LA ROCHE. *Specimen botanicum inaugurale sistens Descriptiones plantarum aliquot novarum*. 1766. (A few identif. in marg.)
- LINDER, afterwards LINDESTOLPE. *Flora Wiksbergensis*. 1716. (The plants annotated by numbers on the interleaves, 1 to 547, and the synonyms of Tournefort, Bauhin and others entered up. An early MS.—*Vide Adonid : Upl* : on pp. 6 & 29.)
- MAGNOL. *Botanicum Monspeliense*. 1688. (Binomial identif. in marg. to most of the entries; the entries numbered 2 to 1366. Title-page has note, *1246 species*. On front fly-leaf, notes on localities around Montpellier,—Hortus Dei, Mons Ceti, etc.)
- . *Hortus regius Monspeliensis*. 1697. (A few slight notes.)
- MILLER. *Gardener's Dictionary*. Ed. 7. 1759. (Identif. in marg. as far as *Ranunculus*. The volume is imperfect and does not go beyond RAN.)
- PETIVER. *Gazophylacii Naturae et Artis*. 1702-4. (Identif. on the plates.)
- PISO. *De medicina Brasiliensi libri 4, et G. Marcgravii Historiae rerum naturalium Brasiliae libri 8*. 1648. (Generic identif. to some of the botanical figures. Front fly-leaf, a note concerning Marcgravius in connection with the figures.)

- PISO. De Indiae utriusque re naturali et medica libri quatuordecim. 1658. (Note on fly-leaf, p. 107, *Horrenda nequitia Pisonis*, on which page Linnaeus has written a note in the margin.)
- PLUKENET. Phytographia. 1691–6. (Identif. on the plates throughout; many of the generic names in Linnaeus's early handwriting. On fly-leaf, list of plants headed *Banisteri*.)
- PLUMIER. Description des plantes de l'Amérique. 1693. (Identif. on many of the plates.)
- . Nova plantarum americanarum genera (cum catalogo). 1703. (Numbered identif. in marg. throughout. In addition, the plate-numbers of Burman's edition of 1755–60 are added.)
- . Plantarum Americanum (fascieuli 10) continentibus plantas quas ipse detexit, et in insulis Antillis depinxit . . . edidit Jo. Burmannus. 1755–60. (Identif. on most of the plates.)
- RAY. Stirpium Europeearum extra Britannias nascentium sylloge. 1694. (Identif. in marg. in one or two places.)
- . Synopsis. Ed. 3 [a J. J. Dillenius]. 1724. (Identif. in marg. almost throughout.)
- RHEEDA TOT DRAAKESTEIN. Hortus Indicus Malabaricus. Vol. 1 only. 1678. (? A few identif. in pencil.)
- ROTTBÖLL. Descriptionum et icones rariores et pro maxima parte novas plantas illustrantium liber 1. 1773. (Identif. on many of the plates.)
- RUDBECK fil. Index plantarum praecipuarum, quas in Itinere Laponico anno 1695, observavit Dn. Olaus Rudbeck, Filius. (Act. Lit. Svec. 1720.) (Entries are numbered 1 to 93. From two notes giving partial diagnoses of plants, this numbering may refer to actual specimens.)
- RUMPF. D'Amboinische Raritet-Kammer, 1705. (Identif. on many of the plates.)
- . Herbarium Amboinense [et Auctarium]. 1741–50. (Identif. on some of the plates.) [Note.—The last plate in the 'Auctarium' belongs rightly to a volume of *Icones ineditae*, engraved by van der Laan.]
- RUPPIUS. Flora Jenensis. 1718. (On end fly-leaf, a list in triple column, *Nova plantarum genera ab Autore descripta*; and later hand (? Linn. fil.) has added binomial identif. in marg. at places.)
- SABBATI. Synopsis plantarum quae in solo Romano luxuriantur. 1745. (Identif. in marg. as far as the letter R.)
- SAUVAGES. Methodus foliorum. 1751. (On end fly-leaf,—*Sauvages in litteris 12 febr. 1752*—list of 15 plants under pre-Linnaean names.)
- SCHEUCHZER, J. Agrostographia. 1719. (Identif. in marg.,—in many cases in pencil first on account of the porous paper.)
- . Operis Agrostographici idea. 1719. (Species numbered throughout with the page-numbers of the *Agrostographia*. Annotat. and drawings.) [Note.—7 leaves added at end contain the MS. *Vita Caroli Linnæi*.]
- SCOPOLI. Flora Carniolica. 1760. (Identif. in marg. throughout. Annot.)
- SÉGUIER. Plantae Veronenses. 1745. (Identif. in marg. throughout. Note on title-page, *plantis mille*.)

- SÉGUYER. *Plantarum quae in agro Veronensi reperiuntur.* 1754. (Identif. in marg.)
- SHAW. *Catalogus plantarum quas in variis Africæ et Asiae partibus collegit Thomas Shavius.* 1738. (Identif. in marg., the generic ones early, with the specific epithets added at a later date.)
- SIEGESBECK. *Primitæ Floræ Petropolitaneæ.* 1736. (On end fly-leaf Linnaeus has reduced S.'s genera to his own.)
- SLOANE. *Catalogus plantarum quae in Insula Jamaica sponte proveniunt.* 1696. (Identif. in marg., the generic ones early, with in most instances the specific epithets added at a later date.)
- STILLINGFLEET. *Miscellaneous tracts.* 1762. (Identif. on ten of the eleven plates of Grasses.)
- TOURNEFORT. *Institutiones rei herbariae.* Ed. 3. 1719. (Binomial identif. in marg. throughout. J. E. Smith has added some.) [Note.—This copy did not belong to Linnaeus in his earlier period.]
- TRIUMFETTI. *Observationes de ortu ac vegetatione plantarum.* 1685. (Identif. of the plants figured in the plates, on the front fly-leaf.)
- VAILLANT. *Botanicon Parisiense.* 1727. (Identif. of the Grasses in marg. Identif. on some of the plates.)
- . *Neue Kennzeichen dreyer Classen von Pflanzen mit zusammengesetzten Blumen.* 1754. (Identif. in marg.)
- VALLE. *Florula Corsicae edita a Carolo Alliono.* 1762. (Identif. in marg. throughout; identif. on Plates 1 and 3.)
- VANDELLI. *Fasciculus plantarum cum novis generibus et specibus.* 1771. (A few identif. in marg.)
- VOLCKAMER. *Flora Noribergensis.* 1700. (On front fly-leaf, identif. of the plants in the plates.)
- ZINN. *Catalogus plantarum Horti Academici et agri Gottingensis conscriptus.* 1751. (Specific identif. in marg. On end fly-leaf, 13 plant names with the page-numbers in the book.)

4. LINNAEUS'S ZOOLOGICAL IDENTIFICATIONS IN THE WORKS OF OTHER AUTHORS.

- BLANKAART. *Schou-burg der Rupsen, Wormen, Ma'den.* 1688. (A few references written on the plates.)
- BOHADSCH. *De quibusdam animalibus marinis.* 1761. (A reference to Seba on Plate 1.)
- BONANNI. *Recreatio mentis et oculi in observatione animalium Testaceorum.* 1684. (On two fly-leaves at end, identif. of many of the shells depicted in the plates.)
- BRISSON. *Regnum animale.* 1756. (Identif. in marg.)
- CLERCK. *Svenska Spindlar.* 1757. (Specific identif. on the plates. Index of species on end fly-leaf.)
- [DEZALLIER D'ARGENVILLE.] *L'histoire naturelle éclaircie dans . . . la Lithologie et la Conchyliologie.* 1742. (Identif. to most of the figures in the Plates, with numbers added to the names. These may be determinations having reference to the Linnaean Mollusca collection.)

DAUBENTON. [Icones ineditae Historiae Naturalis.] (Some identifications.)

DRURY. Illustrations of Natural History, wherein are exhibited . . . figures of exotic insects. [Vol. 1]. 1770. (Identif. on many of the plates.) [Note.—Plate 1 is inscribed,—‘Colour’d by Mr. Harris.’ Linnaeus has inscribed on the title-page, *Mr. Drury Goldsmith in the Strand London.*]

EDWARDS. Gleanings of Natural History. [Plates]. [1758–64.] (Identif. on many of the plates.) [Note.—Linnaeus has made a MS. title-page,—*George Edwards Librarian to the Coll^{re} of Physicians London.*]

ELLIS. An essay towards a natural history of the Corallines. 1755. (Identif. on the plates.) [Note.—Loosely inserted is an MS. by Ellis,—‘Rules for collecting and preserving specimens of plants.’]

FRISCH. Beschreibung von allerley Insecten in Deutsch-Land. Th. 1–13. 1720–38. (Identif., almost entirely binomials.) [Note.—Loosely inserted in the second volume are 8 leaves of MS. giving certain generic names of insects with, in some cases, the citations to Frisch filled in.]

GOEDART. Metamorphosis naturalis. [? 1669] [Plates only.] (Binomial identif. of the insects.)

KLEIN. Historiae Avium prodromus. 1750. (Identif. in marg. throughout.)

PALLAS. Elenchus Zoophytorum. 1766. (Many identif. in marg. Annot.)

—. Dierkundig Mengelwerk; vertaald door P. Boodaert. Stuck 5. 1770. (Note on plate,—*Brucher.*)

PETIVER. Gazophylacii Naturae et Artis. 1702–4. (Identif. on the plates.)

PODA. Insecta Musei Graecensis. 1761. (Corrections to a few of the specific names.)

RAY. Synopsis methodica Animalium Quadrupedum et Serpentini generis. 1693. (Many identif. in marg.)

—. Historia Insectorum. 1710. (Identif. in marg. throughout. Annot. on front fly-leaf.)

—. Synopsis methodica Avium. 1713. (Identif. in marg. almost throughout.)

—. Synopsis methodica Piscium. 1713. (Identif. in marg. in many instances.)

RÉAUMUR. Mémoires pour servir à l’histoire des Insectes [4 vols. of plates.] (Identif. in some instances. On front fly-leaf of vol. 1, tabulations of the Classes of Caterpillars and *Papilio.*)

SCOPOLI. Entomologica carniolica. 1763. (Identif. in marg. in some instances.)

—. Icones (figg. 1–815) ineditae Insectorum Carniolae. (Some of the numbers underlined, and some missing numbers added.)

STRÖM. Beskrivelse over Fogderiet Söndmör beliggende i Bergens stift i Norge. 1762. (Identif. in marg. at many places.)

VOET. [Descriptiones et Icones Coleopterorum.] [? 1769.] (Identif. to some of the figures in the plates.)

5. LINNAEUS'S MISCELLANEOUS ANNOTATIONS IN THE
WORKS OF OTHER AUTHORS.

- BROWALL. Examen epiceriseos in systema plantarum sexuale Cl. Linnaei. [1739.] (Certain passages are numbered in the margins, and a few are underlined.)
- . Betankande om Vatuminskningen. 1755. (Inscript. on fly-leaf,—*Multi ad sapientiam pervenirent, nisi putassent se pervenisse. Senec.*)
- CAESALPINUS. De plantis libri XVI. 1583. (A few side-notes to Liber Primus.)
- CAMERARIUS, R. J. De sexu plantarum epistola [*Ex Valentini, Polychresta exotica*]. 1701. (A few annotations.)
- ECK, CORNELIUS VAN, Praeses. De mandragora. *Resp.* Andreas Holtzbom. 1704. (Note on title-page,—*eadem cum authoris dissert. de Mandragora habita Ups. 1702. Praes. O. Rudbeck eadem verba/eadem paragraphi/totidem literae.*)
- FERBER. Briefe aus Wälschland über natürliche Merkwürdigkeiten dieses Landes. 1773. (Notes on end fly-leaf,—16 lines, with a quotation from Pliny, VII, c. 1, *Naturæ vis et majestas in omnibus momentis fide caret, si quis modo partes ejus, ac non totum complectatur animo.*)
- GRAEVIUS. De fundamentali plantarum notitia rite acquirenda. *Resp.* Olaus Rudbeck, fil. 1690. (Sections 25–40 much underlined and annotated.)
- GRONOVIVS, J. F. Flora Virginica. 1739–43. (Annot. in text. On end fly-leaf,—*Svecicæ plantæ in Virginia nascentes.*)
- HILL. Hortus Kewensis. 1768. (At p. 6 a list is inserted, *Semina* and *Specimina*, which is possibly in Linnaeus's handwriting.)
- HIPPOCRATES. Aphorismi. 1609. (Notes on fly-leaves.)
- JOHRENIUS. Vade-mecum botanicum. [1710.] [2 copies.] (Copious annotations; drawings.)
- KRAMER. Elenchus vegetabilium et animalium per Austriam inferiorem observatorum. 1756. (On front fly-leaf, some geographical names,—Alpes, etc.)
- LESKE. Ichthyologiae Lipsiensis specimen. 1774. (Notes on end fly-leaf.)
- MAGNOL. Botanicum Monspeliense. 1688. (On front fly-leaf, notes on localities around Montpellier,—Hortus Dei, Mons Ceti, etc.)
- MYLIUS. Hortus philosophicus. 1597. (Early notes on end fly-leaves,—Four lines on Biblical plants; list of trees headed,—*Arbores dicitur Deis.*)
- RAY. Synopsis methodica Animalium Quadrupedum et Serpentini generis. 1693. (On front fly-leaf is a condensed biography of John Ray.)
- RÉAUMUR. Mémoires pour servir à l'histoire des Insectes. [4 vols. of Plates.] (On the fly-leaf at beginning of vol. 1, tabulations of the Classes of Caterpillars and *Papilio*.)
- RENEALMUS. Specimen historiae plantarum. 1611. (On front fly-leaf, *minor moment. allegatum a Bauhinis.*)
- RUPPIUS. Flora Jenensis. 1718. (On pp. 369 to 376 a list of abbreviations of botanists' names is given, with their works.)
- SALERNO. Schola Salernitana. 1573. (On front fly-page, note on the book in Linnaeus's early handwriting.)
- SCHEFFER. Lapponia. 1673. (On front fly-page, notes on the Lapland journeys of Forsius, Rudbeck and Linnaeus. Brief side-notes.)

- SCHEUCHZER, J. Operis Agrostographici idea. 1719. (Notes on, and drawings of, grasses.)
- SÉGUILIER. Bibliotheaca botanica. 1740. (A few corrections and notes.)
- SENECA. Scripta quae extant omnia. 1587. (Many passages are underlined either in pencil or ink,—the ink ones appear to be by Linnaeus.)
- SENNART. Hypomnemata physica. 1636. (Marginal notes made during his reading, which, often by means of signs, greatly condense the words of the text. These early annotations contain nothing original, except that on p. 460 Linnaeus adds *Tilia* to the passage giving the trees on which mistletoe grows. On end fly-leaf, *Deus vocal τὸ ἀντίον τῆς ὄντος*, copied from the text, p. 2.)
- SIEGESBECK. Botanosophiae verioris brevis Sciagraphia. 1737. (Certain paragraphs numbered and passages underlined. On front fly-page, fifteen spaced lines of inscription, beginning *Censores tales auctoritate sua* and ending *C. Linnaeus*, in which Linnaeus summed up his opinion of Siegesbeck's attack.)
- TESSIN. Bref til en spåd Prints. 1751. (Inner front cover has slight pencil sketch of a coat of arms combining the one proposed by Linnaeus and that granted by the Swedish Herald; from its circular form it may have had reference to the Tessin Medal struck in honour of Linnaeus.)
- TOURNEFORT. Relation d'un Voyage du Levant. 1718. (On front fly-leaf, corrected spellings of certain place-names. On end fly-leaf, the names of 20 plants, some of which have an asterisk against them.)
- TRONDHIEMSKE SELSKABS SKRIFTER. Vols. 1–3. 1761–5. (In vol. 2, 1763, pp. 17–94, is a paper by P. F. Suhm, 'Raervaerende 18de Seculi Character'. Linnaeus has underlined all the personal names in this paper; and on end fly-leaf indexed six of them, under the heading *a Odódelige* [Immortal].—*Italia*, *Galilœus*, [p.] 33; *Anglia*, *Newton*, 86; *Germania*, *Leibnitz*, 81; *Belgia*, *Boerhaave*, 89; *Svecia*, *Linné*, 88; *Dania*, *Grammius*, 91.) [Note.—On p. 88 the printed text mentions 'den udødelige Linnaeus'.]
- VAILLANT. Discours sur la structure des fleurs. 1728. [A few short marginal notes.]
- WALLERIUS. Mineralogia. 1747. (On end fly-page, Linnaeus's systematic arrangement of minerals.)
- WEDEL. Theoremata medica. 1692. (On 27 leaves inserted at the end of the volume is an early MS.,—*Aetas Anatomica*,—notes on celebrated anatomists and their works.)
- WEPPFER. Cicutæ aquaticeæ historia. 1679. (On front fly-leaf, Linnaeus's criticism of the book.)

6. THE YOUNGER LINNAEUS'S ANNOTATIONS.

- BATAVIA. Verhandelingen van het Bataviaasch Genootschap der Konsten en Wetenschappen. Eerste Deel. 1779. (On verso of title-page,—*Carl von Linné dono D^mi Dalrymple Londin : 1782 d. 20 April.*)
- BUFFON. Histoire naturelle. Suppl. Tome 5^e. 1781. (A few pencil notes by Linn. fil. Two pencil drawings of animals loosely inserted.)
- FORSKÅL. Flora Ægyptiaco-Arabica. 1775. (A few pencil notes by Linn. fil., and a list of some of Forskål's plants loosely inserted.)
